

# It's investment now or fewer jobs, says Tim

THE message that ASTMS union leader Tim Webb has just sent out to his members is more than just another educated essay on the computer industry. For the first time, computer professionals are being told to look to their laurels.

For the past 10 years, they have been chased after, posh and been made to think, by the media as much as by rapid change within their own industry, that the work they were doing was the work of the future, that the only way was up and, while industry after industry was falling into trouble, nothing could halt the acceleration of an industry on which all aspects of future society would be based.

Tim has told these people, and hopefully the government, that this is not necessarily so.

The message behind his pamphlet "Computer Professionals: Image and Reality" is that although there will no doubt be computers everywhere in the future, there is no reason to think that these will be UK machines.

Quite the opposite. All the signs point to the fact that unless more money is ploughed into the UK DP industry now, there will be no such future for UK DP staff. The Japanese and the Americans have already got a firm foothold in the UK, and we have only 5% of the world market.

## Deficit

The UK started off as an innovator in the field of computing, but the industry now contributes a net deficit to the UK economy, amounting to £200 million in 1979. There will not be sufficient

openings in foreign manufacturing and sales offices in the UK to accommodate the vast number of computer staff now working in this country.

And yet the cry is "more staff, more training" - what is going to become of these people if the industry, as Tim predicts "crumbles beneath our feet?"

## Cocooned

Tim's warning and his recommendations are one matter. The other issue that his pamphlet raises is how have computer staff come to be cocooned in this "unique" state of self-importance?

The answer lies in the obvious statement that the computer industry is itself unique. It is relatively young, and people - individuals as well as companies - have been drawn to it for this very reason. Once it was established, it seemed to be the only industry which was assured of a prosperous future.

The computer industry also differs from others because it employs a great number of professionals who are oblivious of, or not interested in, their industry.

Many of them are interested in writing programs, or designing systems and, apart from the people at the top, they never associate themselves with the industry, only with the job.

This arises because the compu-

ter industry covers not only those involved with making and selling computers, but also those who actually use them. It is like saying that the motor car industry extends to chauffeurs and coach drivers. And those who work for British Leyland or British Steel are actually aware of the industry they are working for, and painfully conscious of the fact that any fluctuations in the market will directly affect them.

Computer staff suffer from no such instability.

Tim is saying that it is time they were. For their own good. His message can be roughly interpreted as: if you've got a job now in DP, you'll probably be OK; but don't encourage your children to get involved with it as well.

Who exactly can solve this almost inevitable landslide of the UK computer industry? Tim looks to the government and to the unions to play their part.

The government, he says, must be prepared to make confident investments in the business and also be more liberal with grants for areas where manufacturing branches of industry can be successfully housed.

The present government has a poor record for this sort of aid and it is highly unlikely that it is going to change its ways with just the

## Puzzler

THIS week's problem involves a sort of mathematical "golf", to be played over a course of nine holes. Tee-to-pin distances are respectively 325, 275, 350, 225, 400, 425, 150, 300 and 250 metres.

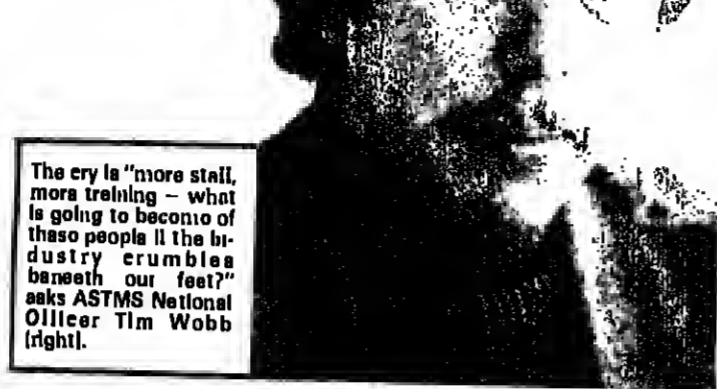

You are asked to find two shot lengths which would enable a golfer to get through the course in only 26 strokes - always assuming that he was sufficiently skilful to hit exactly which of the two lengths was required on each stroke.

All shots must be played in a straight line towards the hole, or beyond it so as to play back in a straight line. For example, if the two shot lengths selected were 85 and 100, then the first hole could be negotiated using five 85 metre shots forward plus one 100 metre shot back.

See page 37 for the two optimum shot lengths and the 26-stroke minimum round.

My omission of just two little words in the October 2 problem brought a virtual maelstrom of phone calls and letters swirling around my ears. The first sentence should have read, "There is only one solution to the equation  $x^2 + y^2 = z^2$  given the fact that all three integers involved are different and prime."

This would make the answer  $2^2 + 11^2 = 117$  - a unique, yet another big slice of humble pie for Puzzler, who hereby proffers abject apologies.

The cry is "more staff, more training" - what is going to become of these people if the industry, as Tim predicts "crumbles beneath our feet?" asks ASTMS National Officer Tim Webb.

prompting of one white collar official.

The Microelectronics Industry Support Programme has been reduced to £55 million. This is the same amount now allocated to the Microprocessor Applications Programme (MAP). ICL has only received £40 million in direct financial assistance.

The most obvious pointer towards Government awareness of the situation is the delay over Inmos.

"The delay in providing Inmos with the agreed public funding does not make for confidence in the government's ability to comprehend the available opportunities," writes Webb.

Although stating that there are no instant solutions for all the problems that arise in a "fast-moving profession", Webb lists in his general conclusions that the government should require foreign multinationals to comply with the provisions of the OPA guidelines on the provision of training information, particularly trans-

## Why computer staff need a union now

IN his report, Webb notes that computer professionals are "probably the single most mobile occupational group in the UK, with an estimated turnover of 20% per annum."

They are a young, highly-paid group. But, says Tim: "High mobility, whilst superficially attractive and occasionally desirable, can disadvantage the employee in that employment legislation, designed to protect the individual at the place of work from discrimination or dismissal, does have stipulated minimum periods of service in order to qualify for such protection."

To help those who are susceptible to this kind of danger, the unions too must fight. Salaries should be properly negotiated and evaluated and should reward expertise, responsibility and qualifications. Provisions should be made for sabbatical leave and early retirement and job security agreements should be negotiated.

All these measures can only come about, however, when everyone who has anything at all to do with the computer industry be-

lieving and net import and export figures.

Education, too, for young and old, is something much overlooked in this country compared to our foreign counterparts. Both in schools and in government retraining schemes such as TUPs and the school, more money and skills should be made available.

And the only ones not to be on the government's shoulders. Industry, too, should look further than just solving its immediate staff shortages and invest more in in-house training schemes to compensate for the ever increasing number of redundant staff.

This point is one which concerns Webb particularly. It is now a fact that people are being made redundant at an early age. We are quite accustomed to the assumption that new technology is putting people out of work.

The notion that people are being made redundant who actually work with that technology, because their skills are obsolete, is an alarming one.

Page Six invites your opinions on this sensitive subject. Are you aware of the delicate position you are in?

Webb... the delay in providing Inmos with the public funding does not make for confidence in the government's ability to comprehend the available opportunities.

## Women have nearly made it

THE ASTMS pamphlet "Computer Professionals: Image and Reality" besides being a war of frightening data, provides some rather less

Like all good unions, it is the situation of women in the industry as a case in point.

"There is little incentive," for example, "to encourage the industry to recruit female graduates with the attitude who have been by the higher education

into obtaining any degree than the traditional male engineering and scientific ones."

"In the related needs communications, official statistics showed that only 10% of the female population were in the computer industry," it continued.

## Success

Some on ASTMS are the "related area of success" which may be more

one field where many have succeeded. The industry is rising just about the same time graduate women are finding their own in the general.

Now, walk into any computer firm, software installation and you will find women filling many different roles from operators to systems analysts, programmers and managers.

And as for the "old" barrier, surely this is a woman's world. It has always been a man's and women's world. But that it hinders success is no longer true, except in a specialized area of computing.

Most users actually state that a non-technical type of degree is irrelevant. It is often people of some types of jobs.

So although we are ASTMS for champions cause, the battle is long.

## SOFTWARE FILE

# For those who do not want VSE

"THE release of the new Nixdorf 8890 is going to be a slow, controlled release in Europe," said Steve Bronarski of Gerrard Data Systems, the company which has just tied up with Nixdorf's NCS to market a whole range of software products (CW, September 18).

"Our aim is to get people who don't want to go over to VSE. Nixdorf bought out EDOS from CSC to make it easy for people to migrate from DOS/VSE to another

OS, since IBM won't support 'foreign bodies'. It allows clients to change OS without any change in standard VS job control," he continued.

He let slip an interesting side-light on German logic. The new Nixdorf machine, based on Elbit's Anet (CW, September 25) has been titled the 8890 to avoid the teutonic tongue-water 8880, achtundachtzig arztzig, which was the next number in line.

Gerrard Data Systems will be

concentrating on the NCS range which aims to provide a "complete alternative" to IBM software.

The range includes Dex, an on-line data entry system. Even, for extended console support, an extended procedure language, EPL, and facilities for tape and disc management. There is also a database management system and a batch/online facility for program development and development and maintenance.

The online data entry system is said to improve operator control of CICS, allowing direct partitions, screens and messages. Screens can be shared by other applications and the system handles VM-type commands: one user-oriented feature is that it scrolls downwards rather than upwards.

● A large gap in the range has just been filled by the choice of Allergo's Shadow II TP monitor for the 8890, under the name TCP.

## Mainframe-type query language for micro users

A QUERY language and report writer has just been released by Micro Data Base Systems, the US firm which supplies a database running under CP/M operating system for Z80, 6502, 8080, 8086 and other machines.

The query language, MDDBS.QRS, follows the trend set by mainframes towards ad hoc queries phrased in non-procedural English phrases. It works with the hierarchical version, MDDBS, as well as the MDDBS.

The language follows a similar format to its mainframe "big brothers". A one-off query to list all females and their phone numbers under 35 in department 43 would be phrased as follows:

LIST NAME, PHONE FOR SEX = FEMALE, DEPT = 43 AND AGE LT 35 THRU OEPS, EMPLOYEES.

Although not entirely free format, the design of the query language requires very few tricks to

be learnt. There are also facilities to customise the language for non-technical users, and questions can be filed for further use or routed to a printer.

## Machine language

The query facility, like the MDDBS system itself, is written in machine language which speeds up the process of retrieving data.

The range of the language is surprisingly wide, allowing complex expressions in the FOR clause, and able to cope with arithmetic expressions, each involving one or more data type.

Another announcement from MDDBS at the Chicago Software Info, where MDDBS.QRS was on show, was the forthcoming MDDBS.VAC facility which extends the Data Definition Language to give the database designer greater control over the mapping of logical records.

## Thumbs-down for market

THE software mart which formed part of the IKD in Berlin was given the thumbs-down by most of its participants. Only a few stands - Siemens, IBM, Philips and Nixdorf, with a couple of software houses - were to be found in a large echoing hall. More significantly the exhibition was off the beaten track, housed in the bridge section of the ICC Congress Hall, and visitors were scarce.

IBM's stall was unstaffed, displaying a gripping range of brochures. Siemens did better, with a real time model demonstrating remote control by robotics.

No one seemed impressed by the turnout and organisation, but the idea won general approval. It is hoped that the next IKD, to be housed in the ICC from now on, will give the show more limelight.

## UK launch

AN Integrated Business System, IBS, has been launched into the UK market by Prime. The move is part of the company's strategy to provide "total systems" for medium to large users.

## Rewritten in Cobol

THE accounting package Sapphire from Pentagram (Software File, August 24) has been rewritten in Cobol for mainframe users. The new version will be available in December at the same price as the previous RPG II package, £4,500.

## Real time system

A REAL time production system for medium to large factories has been adopted by Cable and Wireless for Oats General kit. It has already found a customer in Aston, which has dropped its IBM bureau service as a result.

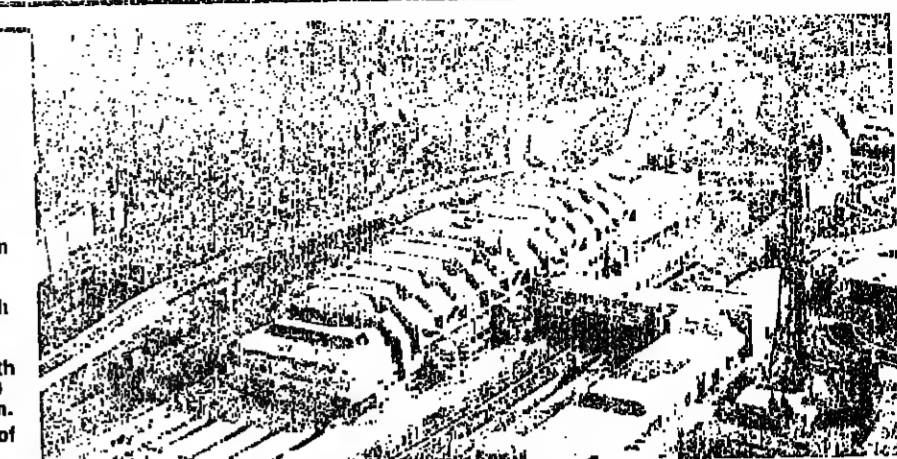

The production system Impecan comes from Computer Systems Development and costs £15,000. Its systems are sold on a turnkey basis, mostly in the manufacturing field, and are also available on System equipment.

## Host to the IKD

THE IKD in Berlin (right) was the event chosen by Nixdorf to launch its new remote maintenance facility for use with the Nixdorf 8870 operating system.

The presence of the company at the software mart was an indication of its keenness to be seen as a purveyor of software as well as hardware.

Also on show for the same machine were the utilities Checklist Input, Customer-Oriented Output, Chico, and the Implementation Support System, ISUS.

## Mastering info technology

BERLIN'S International Congress Centre was the host for this year's IKD, the biennial congress for specialists in Data Processing. The 4th IKD was held on the theme of "Mastering Information Technology - Challenge of the Eighties".

The well-equipped ICC was chosen as the venue so that participants from Eastern block countries, including East Germany, could attend. Over 700 people from over 20 countries took part.

Papers in English, French and German were given by experts in various areas, particularly the world of work and how it

is affected by advances in technology. Chairman Eckhard Fuchs encouraged the DP world to "abandon its reticence" about the major social advantages changes brought about by computers.

"We must aim for the demystification of the computer. We must get our message across to the public to reassure them that there are advantages to the development of information technology," he said.

Among the global issues dealt with by the conference were the development of computer know-how in the Third World, and the role of women in DP.

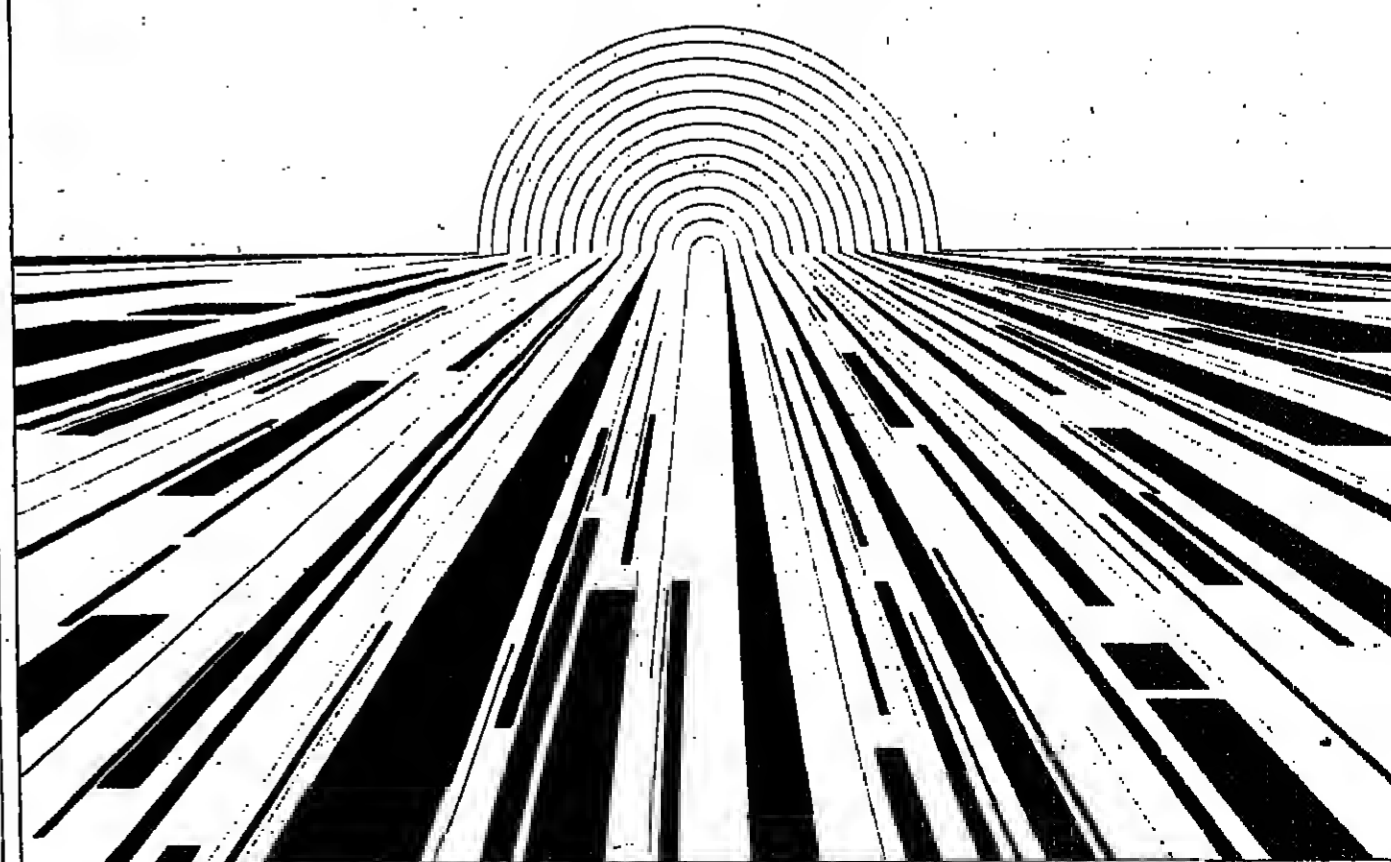

# RELATIONAL SYSTEMS

Your complex on-line applications can be implemented by us on PRIME, VAX or under VM/CMS faster than you would think possible and at lower cost. Our successful relational database processor/query language, INFO, is included on special terms. Ask about our application packages. Amongst them is a sophisticated open-item, multi-currency sales ledger written in INFO.

# Getting the Abbey habit

Applied between systems 1993 and all work on the system has been done

## MICRO NEWS

## Experiment

The system involved the IBM automated design systems and it took only nine months for the sequence of logic entry, auto-placement, auto-wiring, routing and test pattern generation and verification. ROM, RAM and registers needed for a complete 370 were not included on the array device.

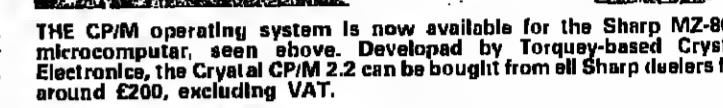

## Variety

The System M-Two comprises 64K of RAM expandable to 128K, and can have either Winchester fixed disc back-up or double density floppy disc, providing 10 to 20 Mbytes or 1.2 Mbytes of storage

**DEMAND** for semiconductors throughout the world is expected to reach \$47 billion by 1985, according to a study on microelectronics growth trends by Mackintosh Consultants. In 1979 the figure was \$14 billion, implying an average annual growth of 22%.

Worldwide consumption of integrated circuits is expected to undergo an average annual growth rate of 27%, from \$9 billion in 1979 to \$38 billion in 1985. However, the total growth rate is expected to drop to 17% in 1981 and increase to 23% for the following years.

According to the report, US companies will keep their 63% share of total semiconductor production, but lose some of their share of integrated circuit produc-

AN experimental transistor micro structure that will switch in 0.3 nanoseconds has been developed by IBM. It uses a merged transistor logic (MTL) technology which is IBM's version of integrated injection logic (I<sup>2</sup>L), and could be used in the future development of VLSI circuits.

IBM's method consists of predicting a pattern of low resistance which could allow current circulation without an increase in electrical charge, and thus to limit the speed of the circuit.

An auto-alignment process in the new structure enables dimensions of the circuit to be reduced and this results in an increase in speed.

Paper passing through the 388K follows a path as tortuous as a Formula 1 racetrack. Labels forced through 180° turns tended to separate from the backing paper as the adhesive had to be strong, but not so strong that labels were welded on so they couldn't be peeled off.

Having sorted this out the designers had to find a glue which wouldn't react to the 350° temperature which is required to fix the print.

sampled before the right oil based substance was concocted. Paper and perforations had to withstand the acceleration of the 3800 crank- ing itself up to top speed.

Bob Buckley, president of National Printing converters, says, "These sticky labels will be beneficial to three parties. Myself, the end user and IBM."

He needs IBM's good housekeeping seal of approval although the multi-national always makes its claims on the side of safety. He has already got several

THE most elementary lesson, General concepts of computers, starts off in a jaunty fashion: "Hello, Andy." If your name is not Andy,

from the beginning says, "We find that it is one way of narrowing the gap between senior operators and the ordinary user."

taken to prepare a good first waiter. The lesson is again and again and over again at the time at the

"Most people have some sort of mental image of what a computer is and what it does, but quite a lot of these images are fuzzy. This lesson tries to clarify the concepts," the computer continues.

Basic concepts are outlined followed by a series of questions. If you tell it that a program is hardware it explains: "A program is not a hardware device just as a recipe is not a kitchen utensil."

For breaking in an uninitiated trainee, the lessons are excellent because they demand a use of the terminals. The more sophisticated lessons are also proving useful. Male lacks.

## We must consult shop floor, says Governor

"UNDERLYING much contemporary writing on computer technology is a stress on the importance of consultation with those affected, particularly in the workplace," the Governor-general of Australia, Sir Zelman Cowen, told delegates when he opened the Eighth IFIP World Computer Congress at Melbourne.

Indicating a problem common to many countries, he warned that Australia was becoming totally dependent on imports for the supply of its information technology.

This raised the question of policy, on which, as Governor-general, he did not wish to speak. "I point only to the problems which this generates for a society dependent in many vital and sensitive areas on operating computers," Sir Zelman said.

"What if sources of supply are threatened in an international crisis?" he asked.

### Vulnerable

He mentioned a Swedish government report which examined aspects of society's vulnerability. Capture the computer, says the Swedish report, and you capture the society which depends on them.

Societies were also vulnerable to acts of terrorism against computers and to the risk of disasters and accidents that could dislocate sensitive computers, Sir Zelman pointed out.

"As society becomes increasingly dependent on computers these concerns assume increasing importance," he said. He also referred to the threats to individual privacy posed by computer databanks.

### Problem

Quoting Mr Justice Kirby of the Australian Law Reform Commission, Sir Zelman said modern privacy was the business of asserting and upholding the individual's rights in respect of personal data about himself.

"Privacy invasions today is a

IFIP MELBOURNE

disputes: the printing industry is one example.

### Competitive

Also at the opening was Ted Wastie, president of the Australian computer society, who said countries like Australia must computerise their manufacturing industries in order to stay competitive.

But Wastie stressed, it must be realised that computing is a service industry. "Computers must be introduced at a rate which the general public finds acceptable," he said.

### 30 chps APL terminal

THE APL character set has been added to the £699 AJ880 30 chps impact matrix printer announced earlier this year by Anderson Jacobson. With APL the printer costs £899, or £49 a month rental, and is claimed to be the only APL printer for under £1,000.

The AJ880 has a seven-wire print head and print spacing is user selectable from 10 to 16.5 characters per inch and from two to 12 lines per inch. It has a 700-character buffer and can communicate at up to 9,600 bps.

### Disturb

Goldsworthy believes that one of the fundamental problems is the fear and distrust in the minds of the community brought about basically by a lack of understanding of technology.

Sir Zelman said the range of computer functions in the public service and administration of a modern state was very great. "Once established in this way, computer systems are effectively irreversible. The impact on employment and on the character of employment is very important. We all know areas in which the proposal to introduce computer technology has produced fierce

opposition. Goldsworthy believes that one of the fundamental problems is the fear and distrust in the minds of the community brought about basically by a lack of understanding of technology.

"Privacy invasions today is a

## Trainees' four point scheme

NADOW founder Sheila Blackmore gave details of the practical training in basic office skills to IFIP. She said students with a DP aptitude went on to the computer training scheme.

The standard IBM programming aptitude test was used and the pass mark was constantly reviewed to ensure that trainees achieved the same level as required by users.

The computer course was divided into four segments, she said: First was an introduction to computer fundamentals where trainees were introduced to computer concepts using a combination of cassettes including self-study and audio visual techniques as well as visits to computer sites.

Second was an introduction to microprocessors and computer languages, where extensive use was made of an Apple II micro.

Third, a segment that covers programming languages and provides training in Cobol and Basic. Facilities for running test programs include an IBM 3270 Model 2 video terminal display unit linked to an IBM 3031 for Cobol and an IBM 370 for training in Basic.

Fourth was on the job training, and, Blackmore said, invaluable help had been given in this area by supporters of the scheme.

There were 70 trainees a year now, she said.

## Bid to get more jobs for disabled in Australia

IN a bid to get more disabled people jobs in Australia, the National Association for Training the Disabled in Office Work (NADOW) has developed a scheme that concentrates on skills in computer operations, programming and data entry. IFIP was told.

In a paper, "A computer training scheme for the disabled," prepared for the IFIP congress in Melbourne, Sheila Blackmore, NADOW founder, describes the NADOW computer training scheme.

She hoped that similar schemes could be set up in other countries to train the disabled in computer skills, but said her association was concerned with people who had no mental problem.

### Challenge

As such their real challenge was just like anyone else's. Thus they did not want to sit at home doing nothing when they could pursue a worthwhile, interesting and challenging career. They did not want to live on government pensions and they do want to enjoy some of the better things in life that money can provide, Blackmore added. Studies had shown that in Australia over one million people suffer from chronic limiting illnesses, injuries and impairments.

NADOW is a voluntary association formed in 1965 by interested business people who recognise the need to provide an assessment and on-the-job training facility in

### Background

It was against the NADOW office training background that computer training scheme started in 1973.

"Irrespective of what disabled people are ideally fit for training in some branch of processing, it is mandatory that they undergo a 13 week course in commercial computer training," Blackmore said.

She told delegates that it was vital that, as computer jobs opened, they understood, saw and it possible helped the work of handicapped people in their own countries.

"We should all remember that we have thousands of vacant computer positions for which we have no qualified staff. Yet, highly trained and totally qualified handicapped people are in immediate and ideal need of people shortage."

"Of the high proportion completed the course, 85% placed in the office and computer fields. Many of the people have been trained would otherwise be in receipt of government assistance and a burden on the community," she concluded.

## Hartley leads local hardware export drive with its 3900 series

PROMINENT at IFIP in Melbourne was the stand of Brisbane-based Hartley Computer Applications, which introduced its Australian manufactured 3900 hardware series (CW, October 9).

Hartley is now expected to be the first Australian hardware manufacturer to export complete systems in significant quantities. Formerly, it added its software to US hardware from DEC, Wang,

and Data General.

Its Hapas software for professional accountants and Practices software for the medical profession will now be offered with its own hardware. But initially its Sheila Small Business System will still be based on Data General hardware.

The three 3900 models make extensive use of Intel 8086 16-bit microprocessors. With built-in 200 megabyte discs from Storage

Technology, the largest model was said to have over 10 times the capacity and four times the speed of other systems in the \$340,000 (\$20,000) price range.

It is also said to be the first computer product to provide DMA (Direct Memory Access) facilities on all input/output channels.

Hartley has installed 200 systems in the British Isles, including 40 in Eire. It is to launch the 3900 in the UK early next year.

It will also launch Sheila in the UK in 1981 but will not say whether this will be a Data General or 3900 based version.

Over half Hartley's orders come from outside Australia and worldwide it has installed 1,500 systems. Its turnover this year will be about \$A20 million (\$10 million).

### Largest

The IFIP exhibition was the largest computer show ever held in the southern hemisphere. Over \$A1,000 million worth of computers were on show and some of the 170 stands cost \$A100,000 to construct.

Over 1,600 people registered for the congress and, with on-site registrations, about 1,800 were expected.

With the emphasis on practical

## Insight into SBA

DATABASE systems at IFIP in Tokyo included a paper by IBM computer scientist Peter de Jong on the experimental System for Business Automation (SBA), which allows the end user as well as the programmer to directly describe applications.

De Jong, from IBM's Yorktown Heights lab in New York State, explained how SBA contained a unified language which replaced the various languages used in

data processing. It required no programming language, but used a graphical representation of data and logic.

The end user deals with real-world objects like tables and charts that he is familiar with when he performs a task.

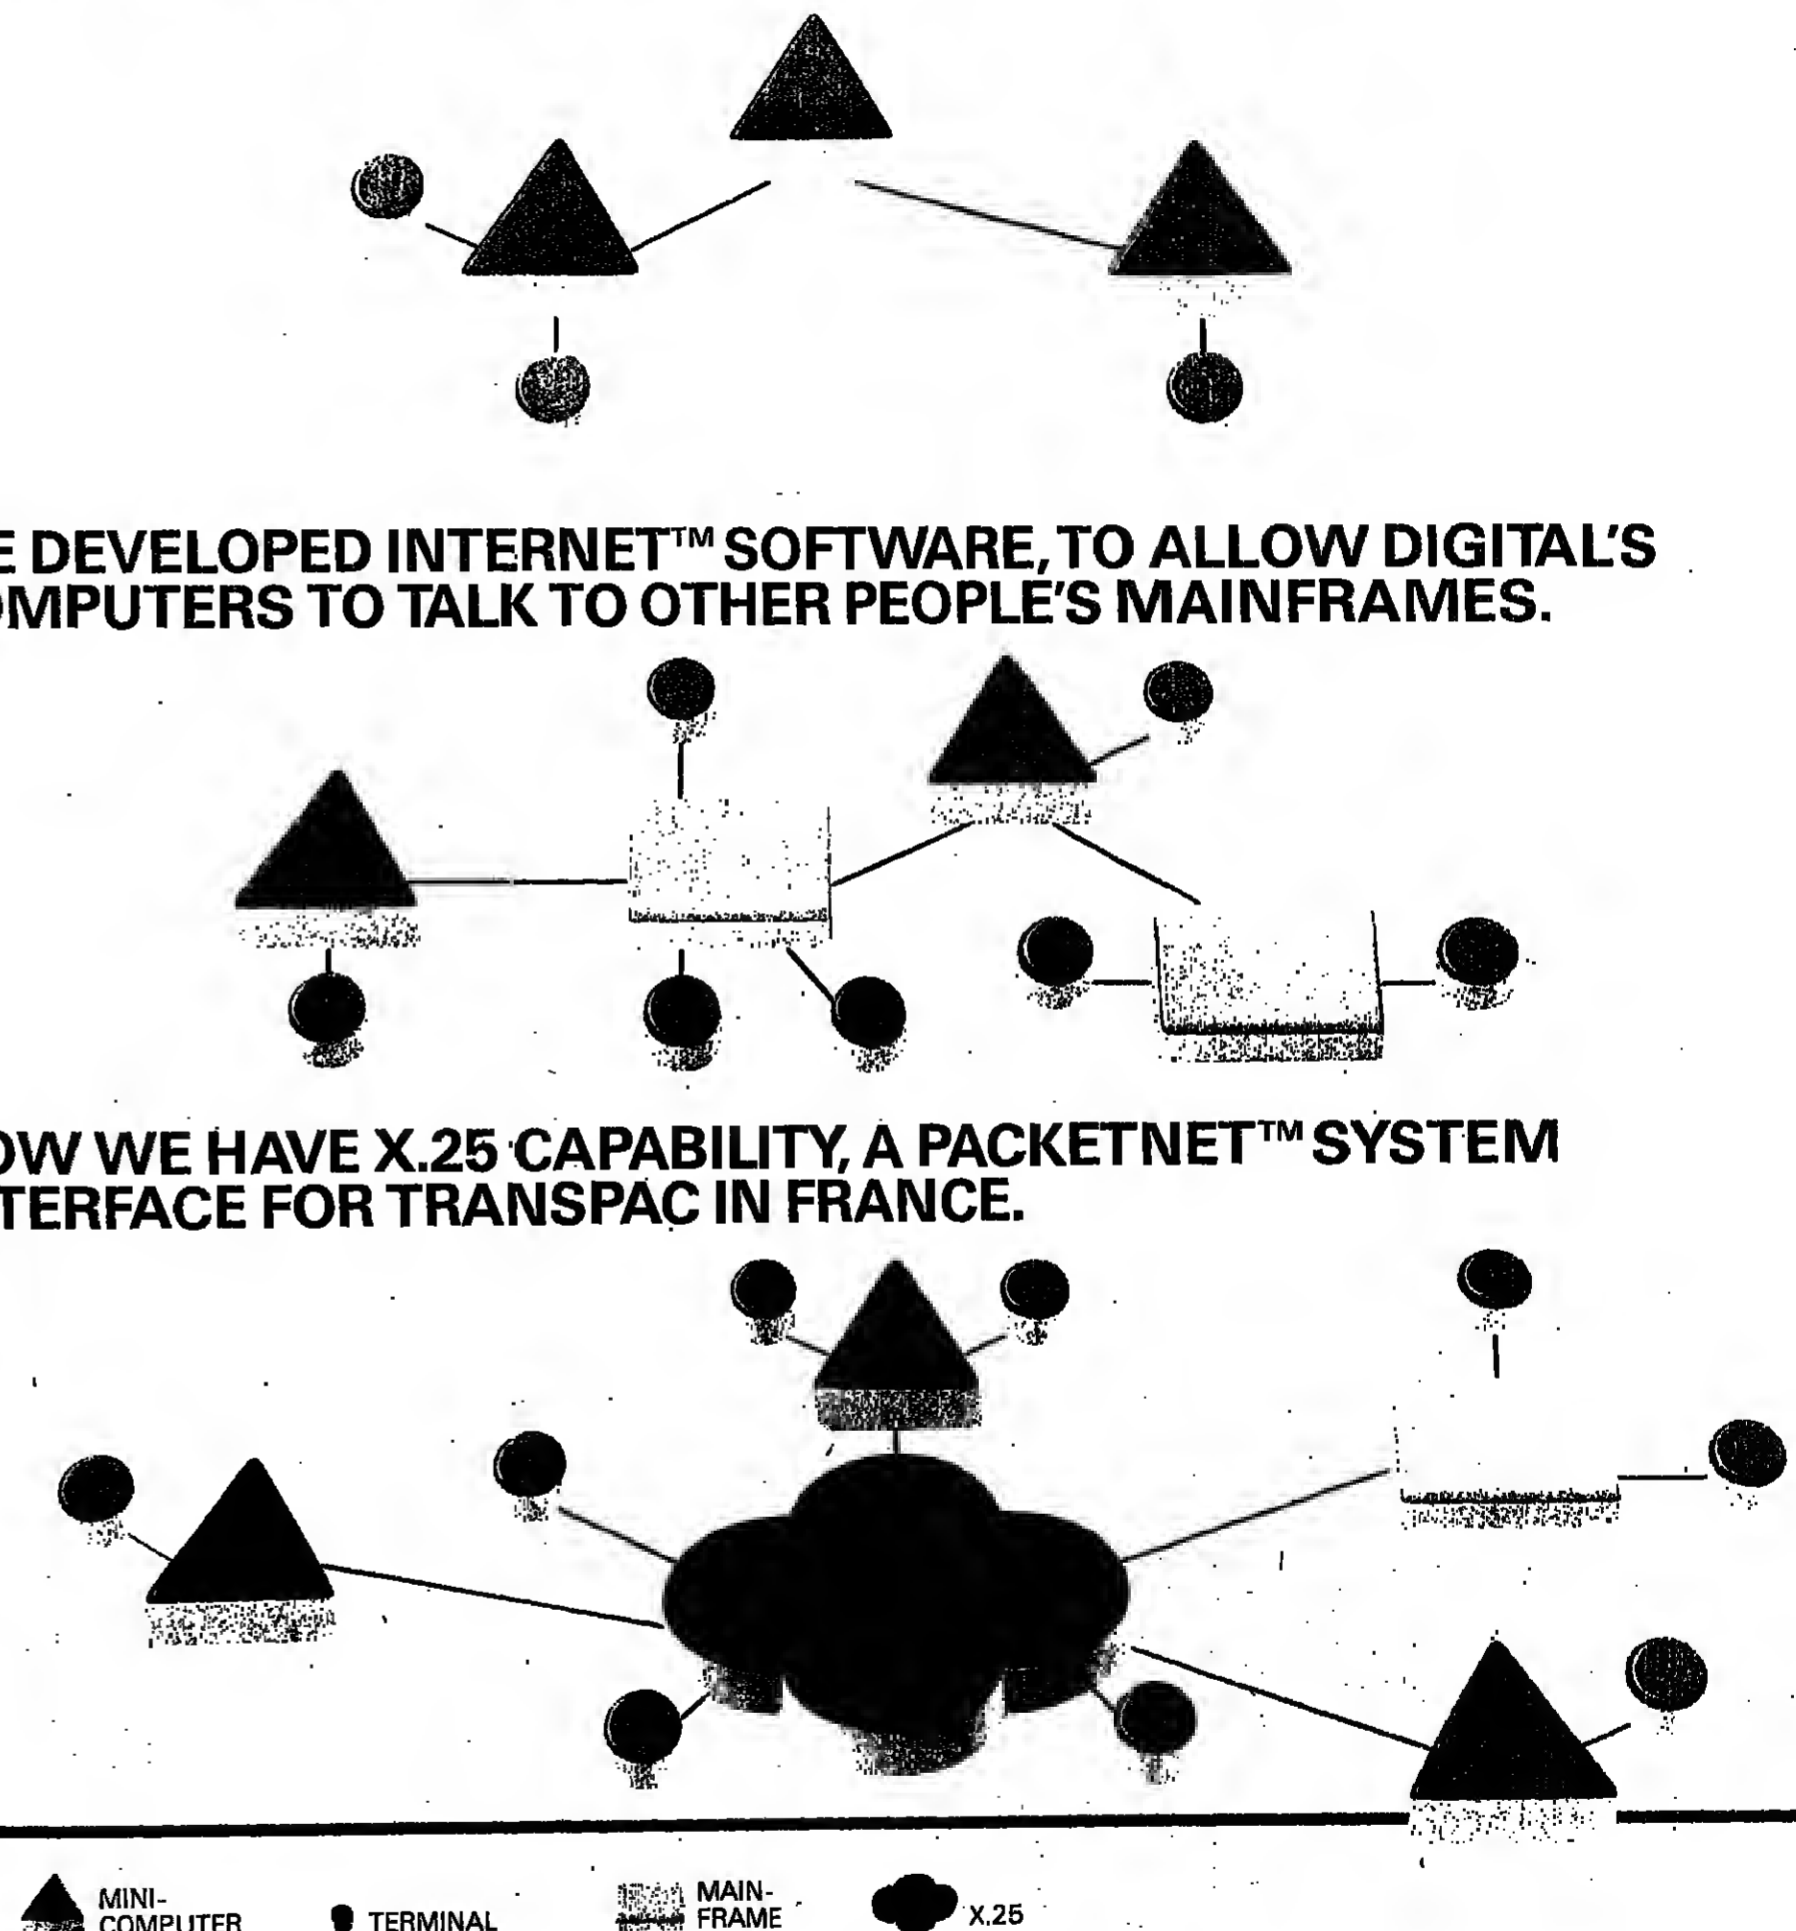

The IBM research director, language, Query by Example, an extension of SBA.

# DIGITAL HAS X.25 CAPABILITY. A NEW DIMENSION IN NETWORKING.

WE PIONEERED NETWORKING WITH DECNET™ OUR CONTRIBUTION TO DISTRIBUTED DATA PROCESSING.

WE DEVELOPED INTERNET™ SOFTWARE, TO ALLOW DIGITAL'S COMPUTERS TO TALK TO OTHER PEOPLE'S MAINFRAMES.

NOW WE HAVE X.25 CAPABILITY, A PACKETNET™ SYSTEM INTERFACE FOR TRANSPAC IN FRANCE.

Now, Digital's computers can communicate over public packet-switched networks.

Currently, packetnet system interface to TRANSPAC in France, is available for use of TSX-11M and RSX-11M plus systems. The packetnet system interface can also communicate with asynchronous terminals connected to the network.

Furthermore, we are firmly committed to supporting other major European public packet-switched networks.

Digital is adding a new dimension to networking.

## ARC local network is star of Ventek's autumn roadshow

VENTEK started its roadshow off in London last week at the Ilfordbury Centre Hotel. During the next few weeks, the show will travel to Birmingham (October 28 to 30), Manchester (November 3 to 5), Bristol (November 9 to 10), Leeds (November 11 to 13), Edinburgh (November 17 to 19) and back to Birmingham (November 25 to 28).

On show will be the two year old proprietary local area networking system,

ARC, from Datapoint in the US as well as the NBI word processing system and the UK-made Data Recognition hand-held terminal.

### Coaxial cable

The ARC Attached Resource Computer, uses coaxial cable carrying data at 2.5 megabits per second to link up to 254 processors. These can be: a file processor

such as a 256K-byte Datapoint 6600 controlling twin 60-megabyte disc drives, which costs £51,000; a £5,000, 64K-byte model 3800 application processor running word processing or data entry software; or a payroll program.

The NBI system is a stand-alone word processor which costs from £7,500 and comes from a firm at Boulder, Colorado, whose initials stand for Nothing But Initials. It was launched in the UK in Feb-

ruary, although it has been on sale for two years in the US and is claimed to be the fastest selling word processor there.

### First time

The hand-held terminal from API Data Recognition, the Reading-based subsidiary of the Unitech distribution group, is called the Datapoint 5.

Costing about £1,000, it is three months

old and is being given its first exposure, the roadshow.

Based on a VARIO 100 processor, the unit can have from 1K to 128K bytes of data storage, and can be fitted with a television adapter, an acoustic coupler, a code reader or a printer, as well as having a 16 character 17-segment LED display built in.

## Pressmen win small online victory

JOURNALISTS on the *Star* and *Tribune* have won their fight for extra paper news stories that are distributed electronically on public information services as well as being printed in the paper.

However, as part of the settlement, journalists' online newspaper rights have been given the exclusive right to report on, that are fed to online terminals.

### Implications

The agreement has implications for newspapers throughout the country that are thinking of going online to run online information services, as a by-product of a routine process.

The *Manchester Star* and *Tribune* are one of the 11 daily papers in the country to be connected to Gannett's *On-Line* service, which provides news all over the UK. The *Star* and *Tribune* are expected to go online in late 1981.

The *Star's* business manager, Lee Canning, said: "It's a landmark which will affect the way we will have become the whole of the country."

Other issues in the strike were more routine ones about pay, but these have also been settled.

### Weather centre

THE Indian Government has given the \$5.5 million contract to the centre which will process data from its *Tris* weather satellite to Systems Development Corp., California, from which the centre is a takeover bid from Burroughs.

The centre, in New Delhi, will be equipped with Digital Equipment PDP-11 minicomputers. Data from the satellite will be used in daily weather forecasting and flood forecasting.

Meanwhile, the Irish Civil Service Building Society, with 42 branches one of Ireland's largest societies, has decided to upgrade from a Burroughs B700 system to a Burroughs B1800 system.

To be installed at the society's Dublin head office, the system will handle applications such as investment and mortgage accounts, statistical analysis and nominal ledgers.

The order is worth about £85,000 and the configuration includes a B1815 central processor

AN ELECTRONIC calculator that can retain a vehicle's mileage under all conditions, including the loss of power, has been developed by National Instruments.

The device uses a microprocessor and a 64Kbit EPROM for memory and a 64Kbit EPROM for the program.

## Users face 22% rises in maintenance bills

A REPORT from the United States reckons that over three more than 40% of the average DTP budget goes on hardware and software maintenance.

It goes on to forecast that user expenditure for maintenance will increase at the rate of 22% a year until 1985, and 14% to 18% a year from then till 1990.

Faced by the prospect of such trends, manufacturers and users in the US are looking for ways to reduce their maintenance expenditure.

In the short-term, manufacturers are looking to give the users as much of the maintenance responsibility as they possibly can.

Users are being offered relatively lower prices for maintenance

# Milgo controller for complex nets

RACAL-MILGO has launched a controller for large and complex networks, the CMS communications management system. It was developed in the UK with the aid of a 25% investment grant from the Department of Industry towards the £1/2 million development costs.

The system is based on a Digital Equipment PDP 11/34, as was an earlier US-designed network controller the Model 185 which is now installed in 10 networks supporting more than 1,000 terminals each, but this one is designed to support up to 10,000 addressable terminals and multiplexers.

Although the smaller versions are designed to help bring efficient operation and reduced costs to small networks, the larger systems aim to make it possible to operate large networks that would be too unwieldy to manage without some such tool.

### Split

Management of a large international network can be split between up to four separate sites in a medium-sized CMS system and the responsibilities for each console can be assigned as geographical parts of the network or as functional parts.

For example, the responsibility could be split between the US and European portions of a network, or between the parts involved in batch access and those involved in interactive access, or one site could be concerned with security aspects of network operation while another is concerned with the general management of the network.

### Directed

Alarm information is then directed to the appropriate site when a fault occurs, where the operator can call up diagrams of the network on one or two colour graphics displays, while he reconfigures links around the faulty section and runs tests on suspect equipment from a split-screen VDU. System prices start at £47,000.

At the same time Racal-Milgo launched a new family of statistical multiplexers, the Omnimax, developed at the main production plant in Miami, Florida. The range contains three models, covering four to 32 channels, and it is designed to be compatible with Racal's modems, offering network control facilities via a separate supervisory channel.

The grant will be used to provide a new Vax 11/780 from Digital Equipment to be housed in a specially converted laboratory and supporting 16 terminals. It is to be

used for the development of software tools, including the Ada compiler. The compiler is expected to be ready by 1982 as a part of the Ada Programming Support Environment.

Here, Sinterman managing director T. D. Dalzell (left) is inspecting the HD 6400 in the assembly area.

According to Briton David Sear, who is in charge of the US office, the company has already received evaluation orders from several Winchester users in the US.

With that in mind, Perex is busy producing its HD 6400, which is intended for back-up and data transfer on Winchester discs. The manufacturing plant of the Sinterman Group, Perex, has opened an office in Silicon Valley, California and intends to market in the UK and Europe as well as the USA.

Major extensions to the standard accepted by IBM VS Fortran include free form source and an IN-CLUIDE statement. A batch debugging facility is also provided.

Optional flagging of non-standard syntax is provided, either at full language or subset level.

A TEXAS Instruments' Model 771 small business system has been used by Leicestershire-based firm, Micro Owl, with an Omni 800 Model 810 printer in the development of a property tailoring scheme for estate agents.

## Timeplex launches stats multiplexer

MULTIPLEXER maker Timeplex has announced a 48-channel addition to its Microplex range of statistical multiplexers and other data communications products to be shown for the first time at Comspec next month.

It also announced that its turnover of \$17 million for the year ended June 30 had grown by over 40% for the eighth year running.

The new Microplexer, the M48C, doubles the previous maximum of 24 channels handled by the range and each channel can be synchronous or asynchronous, with speeds up to 9,600 bps, characters from five to eight bits and odd or even parity. Synchronous channels can now communicate using IBM SDLC, ICL, Honeywell and CDC protocols, as well as IBM bisync which was already supported.

Support for Univac and Bur-

roughs protocols is to be added by the end of the year.

On the line side X25 Level 2 is used, with cyclic redundancy checks being inserted so that errors can be corrected by automatic retransmission.

Other products announced included the M100 software demultiplex unit, which converts the synchronous data stream received down the line into an asynchronous format to be fed to a CPU or front end processor for demultiplexing internally, the M2 Acculink error corrector, for asynchronous links running at 300 to 2,400 bps between minicomputers or feeding simple terminal devices such as plotters and the CM310 data channel monitor, which can display up to 2,000 bytes of data on each of three channels running at up to 19,200 bps.

With that in mind, Perex is busy producing its HD 6400, which is intended for back-up and data transfer on Winchester discs. The manufacturing plant of the Sinterman Group, Perex, has opened an office in Silicon Valley, California and intends to market in the UK and Europe as well as the USA.

Major extensions to the standard accepted by IBM VS Fortran include free form source and an IN-CLUIDE statement. A batch debugging facility is also provided.

Optional flagging of non-standard syntax is provided, either at full language or subset level.

## £225,000 boost for Ada work at York

THE Science Research Council has awarded a £225,000 grant to York University to support research and development in software development which includes the writing of an Ada compiler.

The work carried out by the Department of Computer Science at York has been funded to the tune of £55,000 over the last five years. The York Software Technology Centre concentrates mostly on the development and programming of real time embedded systems. It studies the languages used for such systems and is also working on the Ada language.

Professor Ian Pyle and Dr Ian Wand of the department were both consultants to the CII-Honeywell Bull design team and Professor Pyle runs the Ada UK organisation from York to provide information on the progress of the language.

The grant will be used to provide a new Vax 11/780 from Digital Equipment to be housed in a specially converted laboratory and supporting 16 terminals. It is to be

### Independent

All channels can run at up to 9,600 bps and can take data from any source independent of the protocol used. Multiplexing is bit interleaved and channels contend for time slots, only passing data when the request to send has been acknowledged.

Three types of printed circuit card are used throughout the range: asynchronous and synchronous channel cards and an aggregating card which also controls the front panel. Extra RAM can be added to enlarge the data buffer to cope with the delays experienced in satellite transmission.

## Aiming at PoS market

JAPANESE electronic cash register manufacturer, Omron Teletel Electronics, has formed a UK subsidiary in deal with what it considers to be the growing point-of-sale market.

Called Omron Terminals (UK) Ltd and based at New Malden, Surrey, the company has set up a nationwide network of technical salesmen to provide a full range of

manufacturing, marketing and servicing facilities.

Its latest product, Omron System 80, is a medium-sized cash register which can be equipped with an OCR reader, optical scanner, cassette, floppy disc, VDU, weighing scales, modem for data transmission, 256K bit memory for price look-ups and a linked terminals system.

## Perex back-up help for Winchester users

WINCHESTER discs give systems access to up to 50 million bytes of data hit, as the devices are fixed, there are potential problems in relation to data security - files may be accidentally over-written, or the equipment may be damaged or stolen.

With that in mind, Perex is busy producing its HD 6400, which is intended for back-up and data transfer on Winchester discs. The manufacturing plant of the Sinterman Group, Perex, has opened an office in Silicon Valley, California and intends to market in the UK and Europe as well as the USA.

## IBM plans Fortran 77 compiler

AN IMPLEMENTATION of Fortran 77 has been announced by IBM, planned to be available in April 1981. Fortran 77 was accepted as an Ansi standard in April 1978 but has been relatively little used. This has been attributed to IBM's reluctance to adopt the new standards.

The other major manufacturers will probably be quick to join IBM and some - including Univac, Digital Equipment and Data General - have already announced their implementations.

Major extensions to the standard accepted by IBM VS Fortran include free form source and an IN-CLUIDE statement. A batch debugging facility is also provided.

Optional flagging of non-standard syntax is provided, either at full language or subset level.

# BT to develop 9600 bps modem

A MODEM for two-wire duplex data transmission at 9,600 bps over ordinary dialled telephone connections is being developed by British Telecom at its Martlesham Research Laboratory near Ipswich.

The development is planned to make high-speed digital links widely available for use with facsimile, slow-scan television, text transmission, packet switching and other data services as they grow.

Production versions are expected to be on the market in 1983.

### Development

The development has several parts. An adaptive echo canceller is used to achieve duplex operation and work in this area is also being applied to loudspeaking telephones, satellite links and 80K bps subscriber lines for carrying simultaneous voice and data traffic.

The modulation technique used, quadrature amplitude modulation, uses four variations of the amplitude and four variations of the phase of an 1,800 Hz signal. Following satisfactory tests, the design is being implemented in seven LSI five-volt NMOS circuits to bring down the size and cost of the production version.

This technology is compatible with processes used by General Instruments and Plessey, although no agreement has yet been reached on manufacture.

Minor corrections are being made to the masks of the first chip to be sampled, and debugged samples of all seven are expected by the end of next year.

CCITT, the standard-setting body for the PTTs, has subcommittee evaluating methods of implementing echo cancellation and frequency division for two-wire duplex transmission. Frequency

division is said to have the advantage at speeds up to 2,400 bps, but at 9,600 bps there is not enough bandwidth on voice-grade lines to share between two separate carrier frequencies.

British Telecom has been running field trials of 1,200 bps modems for two-wire duplex operation and is about to place bulk orders for them.

A SYSTEM intended to prevent confrontations over telephone bills between hotel managers and guests has been introduced by a London-based firm.

Called Hotel-Tag and from Systems Reliability, the system records the digits dialled, time, date, duration of the call and whether it is local, STD or international.

An extension of System

## COMPANY NEWS

## US starts to get over depression

A CLUTCH of third quarter results from major DP firms in the US show a markedly different outcome to trading through what President Carter called the bottom of the depression over there.

Higher sales at IBM and, to a lesser extent, at NCR gave them both increased earnings, but component shortages choked off Burroughs' production and caused a sharp drop in profits for the quarter.

In fact, Burroughs is going through its worst patch for 17 years and, as reported briefly last week, year-on-year profits were down for the second quarter running. The company does not hold out much hope of an improvement in the fourth quarter.

Net profit slumped 32% to \$42.2 million on turnover up 4% at \$699.3 million. The main reason for the slide in profits and meagre growth in turnover has been problems in meeting demand for new products, led by component shortages.

To make matters worse, a strong order position began to soften in the third quarter, and the prognosis is that profits will be down 20% for 1980 as a whole.

## 32% rise

Meanwhile IBM's third quarter results rose by the same 32%. The company announced net profits up that amount at \$883.9 million on turnover up 20% at \$6,480 million. The rise was the best in a quarter from IBM since 1974 —

but it is compared with a poor third quarter in 1979.

Main reason for the surge was a favourable change in the outright sales to rentals and services ratio — and IBM has been manipulating its prices to achieve just that.

Sales were up 25% to \$2,590 million, whereas rentals and services rose only 17% to \$3,890 million. While sales moved ahead 6% over the second quarter, rentals and services rose only 4%.

Currency gains helped to swell its profits, contributing \$17 million, compared with \$5 million in

## Finance subsidiary boosts Control Data's profits

CONTROL Data Corp has been very successful in recent years in ironing out the pits and troughs of its business as a result of having a financial services company, Commercial Credit, which often does well when the computer side is off-colour — and vice-versa.

The company saw net profit up 6% at \$40.2 million on turnover up 16.5% at \$938 million.

Most of the improvement came from Commercial Credit; on the computer side, it managed a 2% increase to \$24.6 million in profit on turnover up 23% at \$687.9 million.

The figures are distorted by extraordinary gains — offsets against tax from previous years, which amounted to \$2.2 million in the third quarter of last year, and

the same quarter in 1979.

Since IBM's fourth quarter last year was better than the third, the improvement in the current period is not expected to be so strong. For the first nine months of 1980, profits were 16% up.

Finally, NCR has put its component shortage problems behind it in the third quarter, and has reported profits up 15% at \$54.5 million on turnover up 12% at \$792.3 million.

While orders are falling in the US market, they are increasing slowly in the rest of the world.

## Storage revises Documentation bid

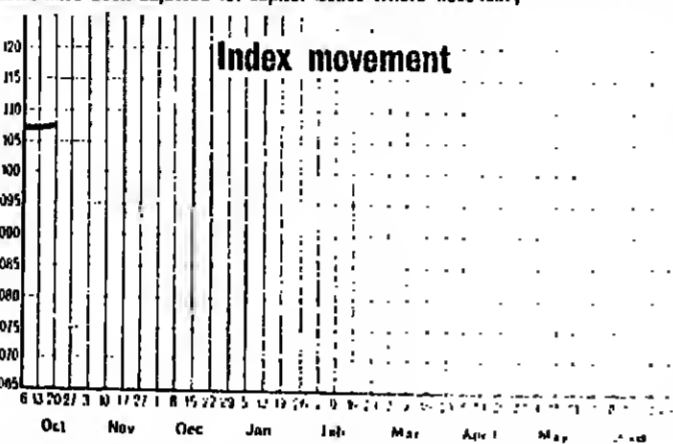

AFTER turning out the Documentation euphoric, Storage Technology has discovered some skeletons and, as a result, revised the terms of its takeover of the Florida printer manufacturer.

It will still pay an overall 0.85 Storage Technology share for each Documentation one, but holders of the latter's shares will only get 0.72 of a share and will have to wait for the remaining 0.13.

The table shows the closing prices in London on Friday and in America on Thursday. The share index is based on the prices of the UK companies in the table. Highs and Lows have been adjusted for capital issues where necessary.

## Wall St goes wild about Apple

THE US investment community is going Apple crazy — and the market has not yet finished the prospectus for its coming share issue.

It is being forced into this by regulations which require a corporation reaching a gross income of \$1 million to go public — and Apple has dramatically exceeded that.

However, the founders who to sell as few shares as possible — people who by no means in the hope of making when they sell them more than begin — will be disappointed.

## Glamour

Reason for the endless speculation about the fact that the branch of the high technology firm is Number One in the statistics at the moment is its futuristic growth.

From a turnover of \$1.2 million only two years ago, it is now up to \$180 million this year — \$100 million in 1981.

The firm has received a reputation for its products, which are the result of the 1980s by itself. Apple Computer Inc. is a company that has been a success story in the computer industry.

The value of the company will be about \$1 billion, which is a very high valuation for a company of its size.

## Model that gives a picture of the firm's activities

IN parts 1-3 of this series, three basic concepts — entity type, relationship type and relationship degree — were introduced. In this part the three concepts will be used to produce a pictorial representation of what the business is interested in. This picture is called the entity model.

There are two reasons why an entity model is drawn: 1. Entity analysis can result in the recognition of many hundreds of entity types and relationship types. The entity model provides a concise summary of the results of the analysis in the form of one diagram, which can serve as a basis for discussion or be used to arrive at a more detailed knowledge of the business.

2. It is the entity model which is used as the basis for database design. The structure of the entity model will be mapped, taking into account all the information which will be discovered in the later stages of data analysis, onto the logical structure of the database.

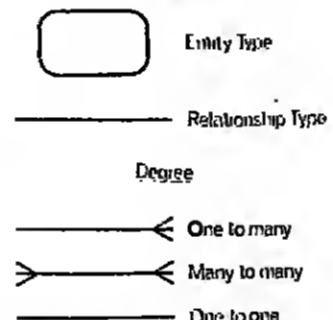

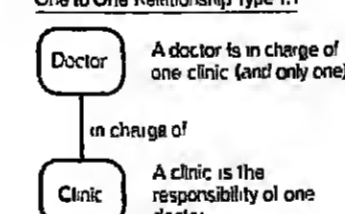

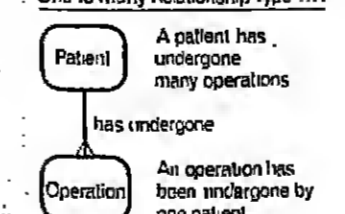

Figure 1. The diagrammatic representation of entity and relationship types.

## One to One Relationship Type 1:1

## One to Many Relationship Type 1:N

## Many to Many Relationship Type M:N

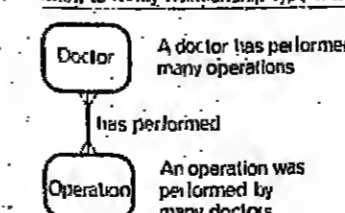

Figure 2. Types of relationship.

## A Relationship Type of fixed degree

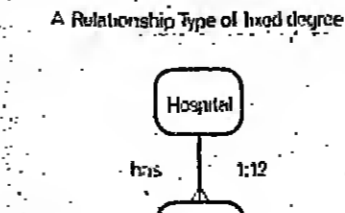

Figure 3. Relationship type of fixed degree.

## How to draw the model

The entity types and relationship types are represented diagrammatically, as shown in Figure 1.

An entity type is represented by a rounded box, a relationship type by a line joining the boxes together, and the concept of degree is shown by a delta or crow's foot. The relationship types of degree many-to-many are represented by two crow's feet and relationship types of degree one-to-one need no crow's feet.

Examples are provided in Figure 2 of how each relationship type would be shown. Note that the name of the entity type is written in the box and the name of the relationship type is written along the line.

## Fixed degree

Where the actual degree of the relationship is known, it is called a fixed degree relationship type and the degree can be written onto the model.

In Figure 3 an example is given of a hospital and clinics. The hospital which is under study has 12 clinics, hence the degree is fixed at 1:12.

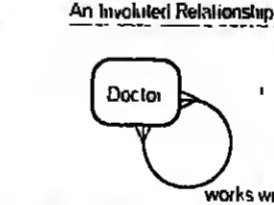

## Involved relationship types

When an entity type is related to itself, the diagrammatic representation is called an "involved" data structure. Figure 4 shows the diagrammatic representation of the relationship type Doctor works with Doctor, which in this case is of degree many to many.

## Optional relationship types

It is useful when drawing the

## Note: it is possible there were planned operations that never took place because of, say, cancellations

## Section I Part 4

A great deal of space is devoted in computer publications to technical issues — new hardware, new software, new programming techniques and so on. The only reason the new hardware and software are produced or the programming techniques are developed, however, is because a user, somewhere, somehow, wants a computer system. The DP task closest to the end user is analysis, and in this series Rosemary Rock-Evans describes Data Analysis, a method developed by Ian Palmer, technical director of the consultancy CACI. The 27 parts of the series will appear as two separate sections.

Analysis is a sadly neglected area. Present methods tend to concentrate on the functional aspects of systems, and ignore the data aspect.

Data analysis is a methodology which links the analysis of functions and data together into an integrated, disciplined, structured approach involving the end user. This series explains the basics of the approach.

## B4, 61A moves to F3, 115

...or if you haven't got a pocket edition of the current Geographers' A to Z of London with you: Dorset House, Stamford Street, S.E.1, moves to Quadrant House in Sutton, Surrey.

This is the new headquarters of our parent company, IPC Business Press — and our new address as from 1st December.

It's a brand-new, purpose-built tower block of twenty storeys linked to a low-rise block of seven, and it's situated right by Sutton railway station. The environment is nice and the facilities are impressive: our new telephone system is one of the most modern in the country and callers will receive just about the fastest answering service they've ever had.

This is only one way in which we hope our move will be of benefit, not simply to us, but to everyone who has been used to contacting us at Dorset House, Stamford Street, S.E.1.

We look forward to seeing or hearing from you at our new address, so please make a note in your diary now.

**COMPUTER WEEKLY** moves on  
10 November 1980 to

**JBA****Design Consultants**

**London c. £12,000**  
A well established consultancy organisation is planning a major expansion in their Video-text systems activities and therefore have opportunities for Senior Consultants to join the team.  
Candidates should ideally be graduates with a minimum of 10 years in computing - at least three of those spent recently in communications/packet switching. Knowledge of X25 a distinct advantage.  
Ability to work with clients, analyse their requirements and relate these to Video-text systems, as well as design new systems/networks of systems, or enhancements to existing systems, is essential.  
Opportunities for international travel.  
**Contact: Jim Baker**

**System Programming Manager**

**South London £11,000**  
A world famous electronics organisation requires a Technical Manager to take responsibility of a team of system programmers supporting real-time and batch applications for the I.R. group.  
Applicants should have at least 5 years experience in a technical IBM environment with sound knowledge of MVS, JES2 and TSO.  
The personality and ability to play a leading role in the technical development of this installation is essential.  
**Contact: Janet Chivers**

**Analyst/Programmer**

**Central London c. £10,000**  
Our client, a highly professional systems consultancy operating at the quality end of the professional and commercial market, utilising the Data General range of minicomputers, is looking for staff to help with the continued expansion in this area and to maintain their present high standards.  
Candidates must have at least 4 years experience in systems design where the speed of development is the major consideration. He/she will mainly be responsible for commercial systems, calculations and sales support, and the upgrading of existing products.  
Successful applicants, in addition to their technical skills will have to be able to demonstrate a high degree of responsibility towards client requirements. For this they will be given every opportunity to progress within the Company, coupled with excellent salaries and financial fringe benefits.  
**Contact: David Hendry**

**Systems Engineer - Communications**

**London to £9,500 + car**  
An international communications organisation is seeking an experienced person to join a team which is responsible for the total support and introduction of a range of minicomputer based communications systems. The Systems Engineer will be required to provide pre and post sales support, including fault finding on customer sites.  
Applicants must have a good working knowledge of IBM COBOL, although consideration will be given to experienced candidates from other machine environments. The ability to give presentations and promote communications products is essential, while experience of an ASSEMBLER language would be an added advantage.  
The position is based in South London but it will cover the whole of the Southern region. Naturally a car will be supplied and in addition the company offers a comprehensive benefits package. Salary will be negotiable according to experience.  
**Contact: Isabel Bruce**

**Analyst/Programmers**

**London £9,000**  
We have been retained by one of the leading consultancies to recruit young data processing professionals, to join their highly technical teams, working on a variety of systems including system audit and security. Every opportunity will be available to develop a career to a high standard, and each individual will be given responsibilities and promotion on merit and achievements.  
To apply it is essential that a first class educational standard was attained, including a degree, preferably Computer Science or related subject with a good pass mark. Also to have at least one year in a commercial environment working with a development team involved in the development or enhancement of a major system, using one of the predominant high level languages, preferably in a large installation.  
**Contact: Janet Chivers**

**Technical Authors**

**Beds. to £8,500**  
A leading manufacturer has a requirement to strengthen both its hardware and software technical writing teams in order to meet current deadlines.  
Applicants should possess 2-3 years experience of writing technical manuals and leaflets covering possibly, operating systems, programming languages, machine code text, systems programming and engineering guides both peripheral and processor.  
You will enjoy excellent working conditions in new offices plus a staff restaurant and other fringe benefits over and above the basic salary.  
**Contact: Brian Postles**

**Computer Resources Manager**

**Croydon Area c. £8,500**  
We have been retained by a well established electro-mechanical and electronic engineering company to recruit for them a Computer Resources Manager to manage the day to day running of their PDP11/34 site. The hardware is newly installed and initially will be implementing a Production Control package, although in the long term other applications will be reviewed.  
The successful candidate will be required to take control of the general operation of the site and to co-ordinate with user departments and software manufacturers. Knowledge of JIBOL is preferable yet not essential, but a working knowledge of COBOL would be an acceptable alternative. Applicants would be expected to possess management skills required to liaise with senior managers and other departments.  
Every opportunity will be offered to progress within the organisation, coupled with a good salary and fringe benefits.

**up to £7500pa  
+ shift allowance**

Fluor (Great Britain) Limited is part of one of the world's most successful companies in the chemical, energy and construction industries, with plants and operations in the energy field. We are at present seeking experienced and motivated operators for our new central computer department. Set up in 1974, and now employing some 30 staff, the department is involved in the development of on-line systems on an IBM 4331.  
Candidates should have a minimum of 4 years' COBOL experience. C.I.C.S. knowledge would be an advantage. Program development will be on-line using I.C.C.F.  
Salary, at present totally tax-free and freely transferable, will be negotiable in a five-figure range.  
In addition, substantial benefits include:  
- 6 weeks' annual leave plus 12 days of Public Holidays  
- rent-free furnished air-conditioned flat  
- full recruitment and retraining expenses  
- annual return air fares for employee and family  
- free education for children  
- free medical care.

The Senior Operator must have 4 years' IBM MVS/JES2 experience, and be able to work with less experienced staff.

The rewards will be in the form of a five-figure salary on the ground floor of the major project, and a very attractive and competitive salary with a wide range of benefits. The Company moves its staff to wherever the work is, and the benefits associated with our operations overseas.

If you would enjoy the scope offered by these new positions, please contact Graham Madenon 01-388 42221 or 42110 or write to him at Fluor (Great Britain) Ltd, Fluor House, London Square, P.O. Box 309, London NW1 2DJ.

FLUOR | GREAT BRITAIN | LIMITED

**TOOTING LONDON SW17**

The South West Home Office is seeking experienced and motivated operators for its new central computer department. Set up in 1974, and now employing some 30 staff, the department is involved in the development of on-line systems on an IBM 4331.

Computing experience must include 4 years' IBM MVS/JES2 experience, and be able to work with less experienced staff.

A five-shift system is in operation, and the successful candidate will be required to work on a five-figure salary with a wide range of benefits. The Company moves its staff to wherever the work is, and the benefits associated with our operations overseas.

**SENIOR OPERATOR £6433 - £8207**  
This position will involve responsibility for the operation of the IBM 4331 computer system, and the development of on-line systems.

**DATA CONTROL CLERK £5426 - £6433**  
This position will involve responsibility for the operation of the IBM 4331 computer system, and the development of on-line systems.

**FILE LIBRARIAN (Days Only) £5361 - £6839**  
This position will involve responsibility for the operation of the IBM 4331 computer system, and the development of on-line systems.

**Tonka Toys**

**IBM SYSTEM/34**  
HENLEY-ON-THAMES  
FRANCE IBM 5280 BELGIUM IBM 5280 GERMANY IBM 5280

**EUROPEAN SYSTEM CONTROLLER**  
Remuneration Package £10,000

The TONKA EUROPE CORPORATION is transferring its European headquarters from Belgium to Henley-on-Thames. An IBM SYSTEM/34 in use in Belgium is to be transferred to Henley in Spring 1981, and links to IBM 5280 systems in France, Belgium and Germany established.

An independent-minded, experienced computer specialist is required to join the management team based at Henley, and to undertake the following:  
- Control of the System/34 in Belgium up to the time of its transfer.  
- Planning and execution of the transfer of the computer to Henley.  
- Establishment of the IBM 5280 links in France, Belgium and Germany.  
- Specification and development of further applications for Tonka.

Management of system operations at Henley, and co-ordination of the use of IBM 5280s which will require some continental travel.

The job calls for a combination of organisational and technical abilities, and a substantial degree of self-motivation in a position of wide responsibility, reporting to the head of the European Corporation who will also be based in Henley.

Practical experience of the IBM System/34 will be an advantage, but the right person and level of competence will be of more importance. Those who consider they have the necessary attributes, and are interested in the position are asked either to write, or telephone (at any time).

Mr. M. J. Seaton  
WOODS & SEATON LIMITED  
Wash Hill House, Woodburn Green, Buckinghamshire HP10 0JA  
Telephone: Bourne End (06288) 28880 (3121)

PORTSMOUTH POLYTECHNIC  
Computing Centre

**SENIOR PROGRAMMER**  
Post No. 772

The Computing Centre operates on ICL 2980 under VME/K and an ICL 2904 under MINIMAC for general college use and a PDP 11-40 for Computer Science students. Applicants should preferably be graduates and have substantial programming experience on a large mainframe computer.

**Salary Scale:**  
£62/POT(2-6)  
£7,287 to £8,328

Application form and further details are available from Staff Office, Portsmouth Polytechnic, Alexandra House, Museum Road, Portsmouth or by telephoning Portsmouth 27681, ext. 317 and returned by 7th November, 1980. (3228)

**Real-Time Minicomputer Systems**

**S. Herts/N. London**

Our client, a manufacturer of advanced, real-time minicomputer systems, is seeking additional experienced software programmers to join a software development group within their Engineering Department.

**Software Team Leader**

**c. £9,000**  
You will have had proven experience of operating systems, compilers or utility software gained in a development, or support role. You will be able to demonstrate the ability to lead a team of 3 or 4 programmers in the technical evaluation of software produced by independent vendors and of integrating such packages into the Company's product range.

**Software Programmer**

You will work as a member of a team evaluating the software produced by a number of independent vendors. You will have programming experience at assembler level and a knowledge of basic software packages. A position in this team provides an excellent opportunity to learn and broaden your experience in the job.

The above positions provide exciting opportunities for involvement in a broad range of software products. Good personnel communications skills are required. The usual large company benefits apply, including relocation assistance where appropriate.

# IRISH DAIRY BOARD - DUBLIN DATA PROCESSING SPECIALISTS

The Irish Dairy Board is undertaking a major online/real time programme to ensure that its systems are geared to meet the rapidly changing requirements of the national dairy export organisation. The Board plans to install in the immediate future, an IBM 4341 computer operating under VM/370 and OS/VS1. Extensive use will be made of CMS and CICS. Vacancies now exist for the following positions at our Head Office in Dublin:

## SYSTEMS DEVELOPMENT MANAGER

To develop and co-ordinate a variety of projects. He/she will consult with all levels of management, evaluate user requirements and ensure that projects are implemented to the user's satisfaction.

The successful candidate, reporting to the Data Processing Manager, should have a minimum of five years systems experience, a strong systems design, implementation and analysis background, and will have previously been responsible for project management.

Experience in implementing online systems would be an advantage. It is desirable that the successful candidate will have a degree or professional qualifications.

## ANALYST/PROGRAMMERS

Applications are invited from persons, preferably with three to four years experience in programming and systems analysis. Employing online techniques in nearly all new developments, the successful candidate will be participating first hand in this expanding technology. Experience in online systems would be desirable.

## PROGRAMMERS

Vacancies exist for programmers with at least one month's experience in COBOL. Familiarity with interactive program development, CICS and advance operating systems would be an advantage.

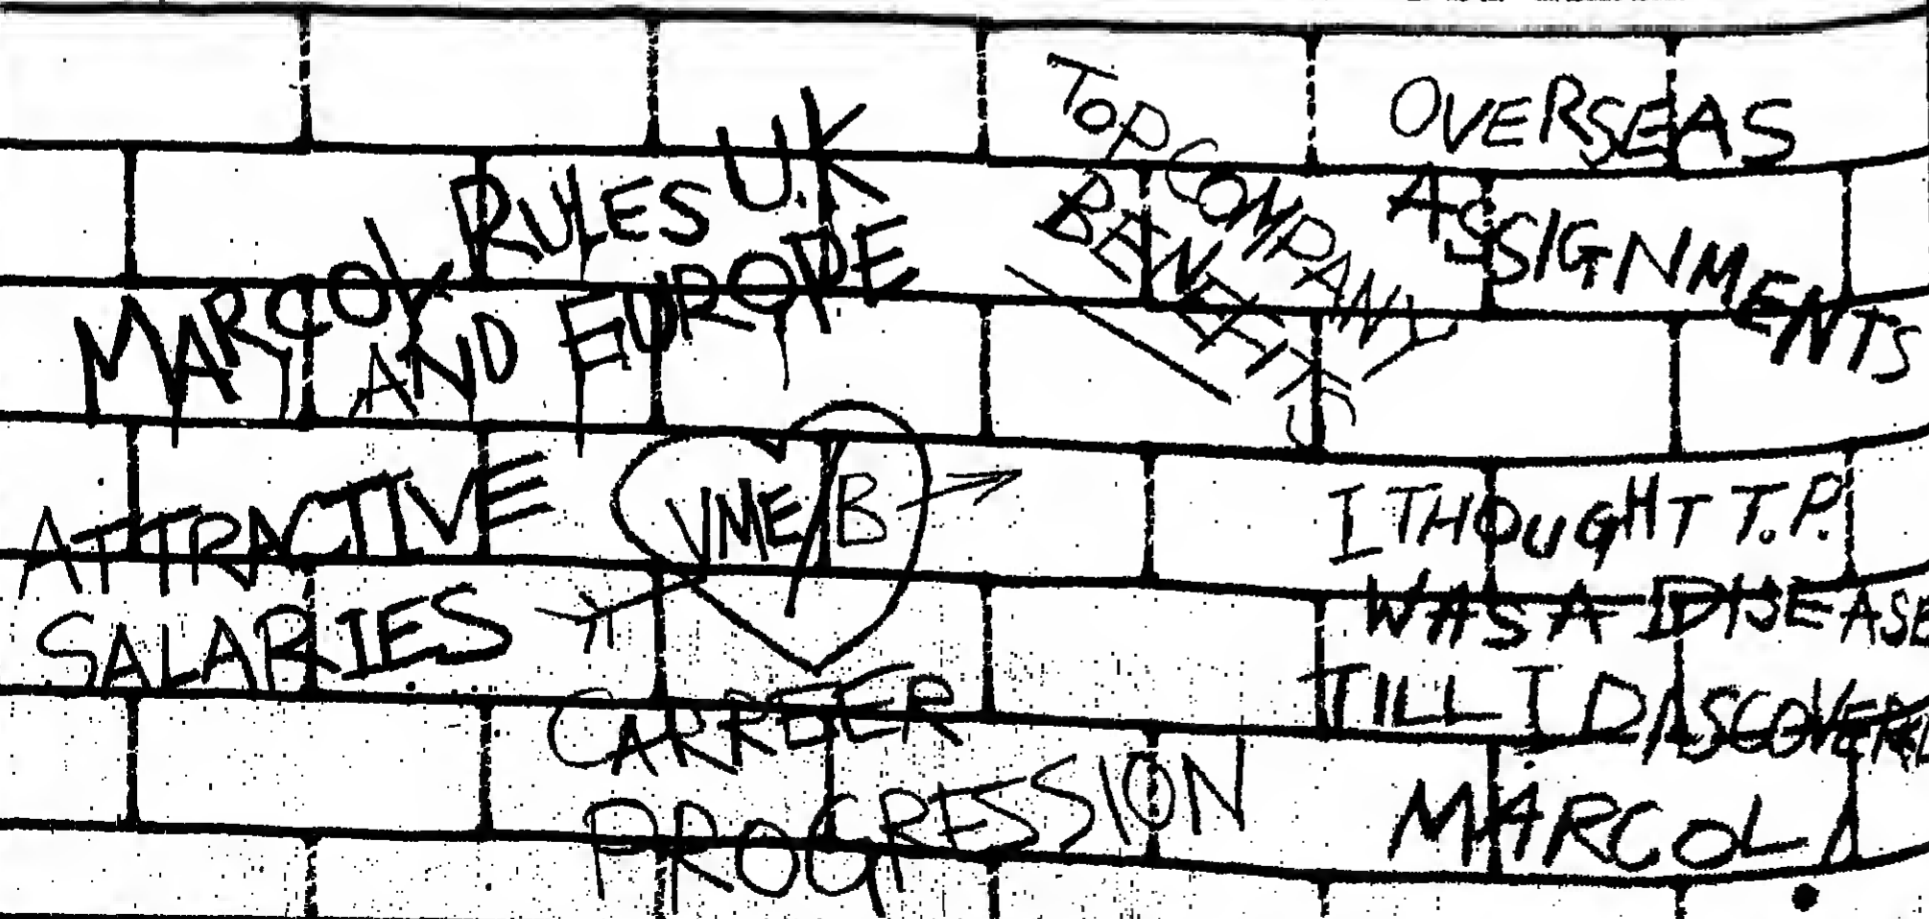

These positions offer exciting and challenging opportunities for high-calibre people who would like to progress their career in a modern computer environment. Attractive salaries will be offered. Contributory Superannuation Scheme.

Please write enclosing full curriculum vitae, before Friday, 7th November, 1980 to:

# Growing interests for professional scope

It may possibly come as a surprise to you to know that Rank Xerox is still developing. Since the 1950s we have maintained our leading position in the field of sophisticated reprographic systems - a reputation which has generated considerable success and profitability. However, we fully realise the importance of keeping pace with the advances of high technology, confidently expanding our interests and, as a result, creating many new and exciting opportunities.

## Communications Systems Specialist Software Analyst

We are fast becoming the industry leader in the explosive growth market-place of communications products, particularly word processors, and for this purpose we have an established Systems Business Division in Uxbridge. Here, you will provide vital technical support to our sales force and service engineers utilising your specialist knowledge to advise and train customers in the implementation and installation of communications applications. This will involve spending the majority of your time visiting customers throughout the UK in order to assess their requirements. Additionally, you will assist in setting up relevant training schemes within Rank Xerox, primarily aimed at an increased understanding of communications. With HNC Electronics or equivalent or, alternatively, considerable data communications experience, you will have the ideal background and, following intensive product training, will enjoy unrivalled scope and prospects. Salary up to £9,000 p.a. plus car.

You will become fully involved in this expansion, joining our Software Support Group in Uxbridge, providing essential back up to our new range of software loaded systems products specifically designed for the office of the future. With responsibilities incorporating the identification of customer requirements, the installation of software, and post sales liaison, the position offers both stimulation and challenge in return for your systems expertise. Your background will have a sound programming and analysis base, primarily in a commercial environment with a minimum of 3 years relevant experience. Knowledge of word processing will be an added advantage. Salary £8,000+ p.a. plus car.

Becoming part of our future has a great deal to offer. In addition to salaries which are as competitive as our professional environment, we have a wide range of highly generous benefits which includes BUPA, free life assurance, pension scheme and excellent sports and social facilities.

So contact Sue Weddell NOW on Uxbridge 38230.

Or write to the Personnel Department, Rank Xerox (UK) Limited, Middlesex House, 4 Mercer Walk, Uxbridge, Middlesex.

MANAGEMENT & EXECUTIVE SELECTION

## MICRO COMPUTER DEVELOPMENT

West Midlands  
Negotiable £10,000 + Car

An exciting career opportunity has arisen within an established mini and micro computer turnkey organisation.

The role includes the development of hardware and software for micro systems from components supplied from a highly reputable and established source. The company has detailed and accurate plans for the future of this venture and will involve the successful candidate in the setting up and progress of the organisation.

You should offer a background in mini/micro computer technology, including in-depth knowledge of OEC based hardware and software. A good technical grounding in OEC operating systems, languages, device interfaces and peripherals is required. Knowledge of commercial, graphical and technical applications would be useful. It is expected that you would have relevant academic qualifications and probably be earning a package around £10,000 to be at the level required.

Any experience in liaison with manufacturers and customers would be very valuable.

This position offers the opportunity to be involved from the ground floor, and to set up and establish a small team of professional staff. Salary will not be a limiting factor for the right candidate and general conditions such as pensions, sickness benefit, five weeks' holiday, BUPA, regular reviews and a company car are well above average.

For a strictly confidential discussion, please contact Mike Hession, Ref. CW288.

## Senior Systems Development Staff

For a major financial institution with a reputation as a leader in the field of life assurance, pensions and investment planning. Due to continued expansion, a number of significant opportunities have arisen in the Company's head office located in an attractive part of the West of England.

**Systems Consultants**  
to £12,750 + Car

To play a leading role in the definition and analysis of complex business problems and the formulation of efficient systems solutions. Ideally candidates will have had at least 5 years substantial large systems experience with a demonstrable record of successful implementation. Initiative, self-confidence and a combination of business flair and strong analytical abilities are prerequisites. Preferred age 25-35. Ref: G861/1

**Business Systems Consultant**  
to £12,750 + Car

Acting as an adviser to senior management, the appointee will initiate and complete a wide range of high level assignments across the whole spectrum of Business Systems work and will assist with the longer term planning of the Company's Admin. System. Applicants should have considerable experience of conventional business systems techniques including O & M, Methods Study, CVM and equipment evaluation. A knowledge of 'office of the future' methodology and a degree or formal Business Studies or O & M qualification would be additional advantages. Preferred age 27-38. Ref: G861/2

**Systems Analysts**  
to £11,800

Developing advanced computer systems has always been a major factor in our client's success. Analysts with a flair for the business side of systems development, who are alert, self-motivated, and determined to build a worthwhile career will find the right sort of challenge. Strong analytical skills, drive and creativity are essential. Experience is less important than ability, but 2 years solid systems analysis experience is a minimum. Ref: G861/3

All appointments enjoy substantial fringe benefits including a non-contributory pension, free life cover, BUPA, a profit sharing scheme plus an excellent relocation package.

London W1V 2BP**

(3269)

# Newcastle upon Tyne

A major British company is in the early stages of establishing a major TP network serving subsidiary organisations throughout the UK. A substantial data centre is already established and is expanding rapidly in terms of workload, personnel and long term demands for its services. A large scale IBM system is installed and installation is required from candidates for the following positions. The company will negotiate excellent salaries in line with the indicators shown and generous relocation expenses. Salaries will be reviewed within six months.

These vacancies are all within the technical support group and end use follows:

## Network Supervisors

Candidates must have practical experience in the operation and support of a medium sized TP network. Experience should include network planning, scheduling, configuring, costing and general technical back-up. These positions should appeal to young specialists, probably working within a team engaged on network support and development, but who now wish to assume more responsibility and become involved in an early stage with a growing installation. (Reference CW8088)

## Network Operators

Within the support team there are also vacancies for Network Operators to assist in the development and support of the network. These are first class opportunities for candidates to gain experience in a rapidly expanding situation where the commitment to TP is total. Candidates could currently be Network Operators, but applications will also be welcomed from Shift Leaders or Senior Operators in an IBM installation supporting a network, who wish to specialise in this field. (Reference CW8089)

## Systems Programmers

These are really outstanding opportunities for young systems programmers with a minimum of two years systems programming experience in a large IBM installation. Key software in use is MVS, CICS and DL/I. For one of these positions candidates must have significant experience in one or more of these areas. The second appointment requires in-depth experience of VTAM and NCP. Appointments can be offered which will suit the level of experience of particular candidates and will also reflect an assessment of the individual's potential for development. (Reference CW8090)

Interested candidates should contact Ivor Norton quoting the appropriate reference in writing or by telephone at the Harrogate Office in order to arrange a confidential discussion.

## Sales Executives

London - Midlands

Bespoke and Package Systems

Are you a successful DP Sales Executive with flair and the maturity to handle the freedom to 'do it your way'? Ideally you will have sold a wide variety of systems solutions to first-time users and you will have worked with a large multi-national manufacturer.

Basic salary is £10K and on-quote earnings are £16K, but our client envisages that the right calibre of professional candidate will earn at a rate of £20K within a year.

Sales Executives are required in London and the Midlands to sell bespoke and package software, either with or without hardware, in conjunction with major manufacturers. Our client has provided computer services to bluechip companies nationwide for over 10 years.

## An Announcement

Our client, one of the world's foremost oil companies, is consolidating its worldwide function of Petroleum Engineering and Exploration from its developed complex at Dhahran, Saudi Arabia. In support of these activities they are building one of the most advanced scientific/technical computer centres in the Middle East. The centre is due for completion by October 1981, and will consist of 4 3033's and some of the world's most sophisticated software. To assist in this massive program they urgently need to recruit SENIOR SYSTEMS ANALYSTS with between 3 to 10 years' experience with large IBM systems, and a background in PL/I or FORTRAN to work on Capacity Planning and Analysis. There are also numerous opportunities for GEOPHYSICAL SYSTEMS ANALYSTS who are conversant with seismic processing techniques or geological data management systems, and PETROLEUM ENGINEERING SYSTEMS ANALYSTS who are familiar with production, reservoir, and drilling engineering technical concepts.

These senior and challenging opportunities are offered to men or women educated to degree level, who could expect a starting salary of up to £21,000 net plus a benefits package which rates amongst the most comprehensive and generous in the Middle East.

Please write or phone Peter Madams on 01-240 1488 (reverse charges) quoting PM/A67 for further details.

## Computer Operations Professionals

**STOP**

### Entry point to the most exciting computer operations environment in Europe

Start here for involvement with the European Space Agency — the organisation responsible for placing and controlling scientific, communications and other applications satellites for users throughout Europe.

We are in the process of final negotiations for a contract to operate the Agency's computer systems at the following locations:

Noordwijk in Holland  
Darmstadt in West Germany  
Frascati in Italy

and the ESA Headquarters in Paris.

With negotiations nearly complete, we want to talk to operations staff who would be interested in taking part in what could be the opportunity of a lifetime. If you have experience on large scale computer systems, a professional attitude to computer operations and are interested in the most exciting

computer operations environment in Europe, we would like to hear from you, especially if you feel you could fill one of the following positions:

**CHIEF OPERATOR  
SHIFT OPERATOR  
SYSTEMS OPERATOR  
PERIPHERALS OPERATOR  
TAPE LIBRARIAN  
KEY PUNCH OPERATOR**

Activities to be covered include scientific and general data processing, data preparation and library services. Operations

include real time support of launch operations and space control, operational support of current and future ESA satellites and running an on-line interface information retrieval service. The hardware currently in use includes C11-Honeywell, BCL ICL 2980's, ICL 4172's, IBM 370, ITEL AS/5, Siemens 3302, Siemens 3277's, Nova 830's and R10 3600.

As permanent employees of RCA you will enjoy excellent salary packages at the highest continental standards plus further career development opportunities for both at home and abroad within the RCA Organisation.

For an application form contact: Joelyn Williams, Personnel Officer, on Sunbury-on-Thames 85511 (over charges) or write to him at RCA Service Division Limited, Windmill Road, Sunbury-on-Thames, Middlesex.

### NOTICE BOARD

**Are you a successful salesman looking for more success?**

**Software Sales • London • £20K + CAR**

Very rarely does a realistic opportunity arise for a successful Sales Executive which is tempting enough to make him move. We believe our client, a leading U.S.A. Systems company, has come up with just such an opportunity. With a well-established European sales support network in cities like London, Amsterdam, Paris and Geneva amongst others and a prestigious client base, they have penetrated even further into the IBM systems market. They are now looking to expand on their success by increasing their sales force in the U.K. If you have experience selling operations based software, ideally to the IBM market, salary, commissions and conditions are excellent with unlimited potential for an already successful aggressive professional.

For more information contact Robin de Rouen on 01-637 9611.

**Chief Programmer -**

**Croydon**

**£11K+**

FREE INS, SPORTS FACILITIES, L.V.s

If you have at least five years' COBOL/ASSEMBLER programming, and experience of RBM 370 under DOS/VS, CICS and VSAM ... we need.

Large two-mainframe installation, developing database and teleprocessing systems and investigating integrated information techniques.

Interested?

Ring Diane Williamson on 01-637 9611

**This is difficult...**

If you're the sort of sales professional who can rise to, and master a challenge, our client will guarantee you:

**£13,700 + 2-litre car**

They have a communications orientated small business systems product. Already highly successful in Europe and all set to penetrate the competitive U.K. market.

As for support you will have the full resources of an established name in the computer industry who will leave the creative selling up to you.

If you live East of London or in South Manchester, contact Tony McGrath on 01-637 9611.

**Kawasaki PROGRAMMERS to £6½K**

Kawasaki Motors, one of the leading motor-cycle manufacturers, is a company working in a young and exciting environment.

Programmers with 1 to 2 years' RPGII and/or COBOL experience can become part of their expanding data processing department. Database and on-line developments on the HP3000 mean involvement in challenging new projects for the successful applicant.

Hewlett Packard experience is preferred but training will be given to the right candidate.

Salary to £6½K plus a merit bonus, pension scheme, life assurance and four weeks' holiday.

Please contact Diane Oubridge on 01-637 9611

### KENT COUNTY COUNCIL For sale by tender

GENERAL AUTOMATION  
MINITOM COMPUTER

about 3 years old, comprising: Processor: 16330, 32K of 16 bit word length core random access memory, 10 Mb disc, 180 character per second matrix printer.

Software: Basic, Commercial Fortran, Fortran.

Further details from Contracts Officer, Kent County Council, West Mall, Maidstone, Kent.

## ARCHITECT'S DEPARTMENT COMPUTER APPLICATIONS OFFICER

Salary to maximum £7722  
(Pay award pending)

The successful candidate will be required to monitor and be conversant with computer developments and applications together with researching and advising on the new technology available which may be pertinent to the work of Architects, Quantity Surveyors and Engineers. In addition there will be a responsibility for supervising two Coders for the development and efficient running of existing computer programmes on the Council's main-frame ICL 2900 series computer in connection with the preparation of Bills of Materials and the processing of the Office Job Costing System.

The successful candidate should therefore have experience with computer techniques, ideally in the building industry, and preferably be able to write simple programmes dealing with technical subjects. Commencing salary dependent upon age, qualifications and experience.

Application form, returnable by 7 November, from the County Architect, Springfield, Maidstone Kent.

## SENIOR ANALYST PROGRAMMER

Playtex Limited, operating from their U.K. headquarters at Port Glasgow, manufacture a wide range of brand name personal and family products for the U.K. and European markets.

The D.P. function requires an additional Senior Analyst/Programmer who will be part of a small team providing D.P. support to all areas of the company. Some European travel may be involved.

The current equipment consists of an IBM System 3/15D with 128K for batch processing and a System 34 for on-line processing with local and remote terminals. Future plans include the installation of an IBM System 38 for which the database design work is underway.

Applicants should have a minimum of two years' experience using RPG-11 coupled with a knowledge of IBM System 3 and 34, preferably in a commercial environment.

## CALMA

INTERACTIVE GRAPHIC SYSTEMS  
A Division of United Computing Systems Inc.

is an American-based company specialising in the production of computer systems for design applications. These applications cover integrated circuit, printed circuit boards, mapping and mechanical design. We are growing rapidly and have recently opened a new European customer support facility located in Kingston, Surrey. To support the expansion, we require the following staff:

### 1) SENIOR HARDWARE TECHNICAL SUPPORT ENGINEERS

Applicants should possess a minimum of five years' experience as computer field service engineers. Experience in microcomputers or plotting equipment would be particularly relevant. c. £3,800 + car.

### 2) HARDWARE REPAIR CENTRE TECHNICIANS

Although previous computer experience would be desirable, applicants possessing a sound practical and theoretical grasp of electronics would be acceptable, as full training will be provided. c. £7,500.

### 3) DIAGNOSTICS PROGRAMMER

This person is likely to suit either a very experienced Technical Support Engineer, possessing an aptitude for programming, or a Systems Programmer with a keen interest in hardware.

The work will involve writing and control of all types of diagnostic, and provision of technical support in situations where the exact nature of a problem requires definition. c. £10,000 + car.

### 4) HARDWARE TRAINING INSTRUCTOR

Required to set up a training department from scratch. Successful applicants are likely to be already employed in this capacity, and have extensive computer experience. Should be a good communicator, and capable of motivating training for a diverse range of products. c. £5,500.

Conditions of employment will reflect the high grade of people being sought and will be very competitive.

PLEASE CONTACT: CALMA COMPANY, NEVILLE HOUSE, 26 JOHN STREET, KINGSTON-UPON-THAMES, SURREY

(3285)

## Programming Team Leaders

with DEC experience, up to £8000

After sixteen years of consistent and profitable growth, Hoskyns has broadened into one of the largest computer systems and service companies in the U.K. Hoskyns Systems Development is a market leader in the development and implementation of application systems for the Financial, Distribution and Manufacturing Industries.

Our minicomputer business is growing fast, and we now need more senior programming staff with the ability to manage projects and help support our growing customer base.

Specifically, we are looking for programmers with team leading and minicomputer system design experience, preferably with knowledge of DEC's PDP 11 series and BASIC, to work in London, Birmingham or Manchester.

If you are interested in these positions please apply to Tony Winslade, Hoskyns Systems Development Limited, 145-157 St. John Street, London EC1V 4QJ. Telephone: 01-251 4581.

## EDP SYSTEMS ORGANISER/ANALYST

We are a highly successful company manufacturing precision engineered products for a world-wide market.

We currently use an IBM System 34 with 9 terminals, a processor of 128K and 128 MB disk capacity.

Planned upgrades will take this to 256K and 256 MB during 1981, and an IBM System 38 is currently under consideration. Existing applications cover financial and production systems with the emphasis on future developments being in the production areas.

IBM MAAPICS is being studied with a view to its use in production and inventory control applications.

The successful applicant will have had considerable experience in industry to include commercial, financial and production functions and have had at least 4 years EDP experience.

A knowledge of IBM System 34 or IBM System 38 would be preferred. A competitive salary will be offered together with the benefits associated with a progressive company.

Substantial relocation assistance will also be provided where necessary to this pleasant rural area where housing is favourably priced.

Write for an application form or telephone our Recruitment Officer, Mr. S. Murphy on Grantham (0478) 6577.

## Over £10,000

This is what we expect to pay for a Shift Leader with drive, enthusiasm and proven management experience to control a shift of 9 highly efficient operating staff. In addition a high degree of IBM technical knowledge of operating is required.

This vacancy has arisen because of the internal promotion of one of our Shift Leaders to the Technical Support Section.

Our operating teams work to very high standards and you will be required to maintain and enhance these in a dynamic environment.

Currently LOLA has a 6 megabyte IBM 370/158AP running under MVS JES2 supporting large IMS TP, TSO and APL networks. An additional processor is currently undergoing acceptance tests on site to enhance the existing services.

Our requirements for this post are a minimum of 6 years' appropriate experience with at least two years' in a senior supervisory capacity. With slightly less than this you could be considered for the post of Deputy Shift Leader.

Further information and application form from Peter Anthony, Chief Operator, LOLA (London On-Line Authorities), Tower Point North, Sydney Road, Enfield, Middlesex EN2 6UE. Tel: 01-386 6611 (Ext. 266).

### Systems Analyst & Snr. Systems Analyst

Essex/Heris. Border. £8,000 to £10,000  
Is your career needing a lift? Come to where brand new development work is the order of the day! One of the world's largest industrial leaders has a dual Honeywell system operating in a real-time on-line mode, and requires first-rate systems people. A wide choice of application areas include accountancy, personnel, production control (MAPICS on System 34), warehousing control and a complex distribution reporting system. Really excellent perks include five weeks' holiday, free BUPA, subsidised canteen, first-rate S&S club and generous relocation expenses. CW43/1. Michael.

CW43/1.

### Senior Systems Analyst

Essex. £8,500 to £10,000  
If you have a manufacturing applications systems background please give us a ring. A very profitable client of ours is urgently looking for the right person to implement new systems. Here is the chance for a more Junior Analyst/Programmer to move into pure systems work. There are the usual large company perks including an excellent S&S club and a proper system of promotion. CW43/2. Colston.

### Insure Your Future in Analysis

City. £10,000  
A major insurance company is expanding its present on-line Honeywell Installation and Investigating brand-new financial management information systems. You could be a major contributor to their new plans. Excellent perks include annual bonus, free B.U.P.A., free life assurance and 50p L.V.s per day. CW 43/3. Michael.

### Senior Systems Analyst

Richmond/City. To £11,000  
Another major insurance company with two locations is anxious to recruit an Analyst with min or max computer experience. Their installation includes both IBM and two types of minicomputer to cut your teeth on. A multiplicity of new and enhanced commercial on-line systems needs your attention, so apply now. They work flexitime and have other perks including an annual bonus and non-CPS. CW43/4. Michael.

### Micro Programmers/Designers

London/Home Counties. £7,000 to £10,000 + Car  
Stand up all those with INTEL 8080 (or ZILOG 80) micro based equipment programming or design experience. Now is your chance to use your undoubted skills to great advantage. A number of systems houses and similar manufacturing companies in S.W. LONDON, W. LONDON & HERTFORDSHIRE are expanding their resources and require your type of experience. Two of our clients offer European travel and company cars. CW43/5. Tricia.

### Communications Engineers

London based. £9,000 to £12,000  
Have you the sort of experience that covers in depth one or more of the following: FILE TRANSFER PROTOCOL, PACKET SWITCHING, NETWORK ANALYSIS, FILE TRANSFER, SYSTEM X, etc. If you have two years or more communications knowledge then this American computer engineering company will be very interested in you for brand new project work. Possibly some training in America. CW43/6. Michael.

### Cobol Programmers — Where Are You?

London & Home Counties. £8,000 to £9,000  
If you are looking for a secure, rewarding future and have 1½ yrs. + experience, telephones us now for the very latest in COBOL vacancies in all manner of installations. Locations are BEDS, BRIGHTON, BUCKS, CITY, CHESHUNT, DAOENHAM, EDGWARE, HARROW, HARLOW, HAYWARDS HEATH, HIGH WYCOMBE, KINGSTON, LEATHERHEAD, N. LONDON, S.W. LONDON, W. LONDON, MAIDENHEAD, STAMORE, SURBITON & WELWYN GARDEN CITY. CW43/7. Tricia.

### Operators

City. To £5,800  
A well-known insurance company requires computer operators with 1 yr. + experience on IBM 370 with DOS/POWER/CICS. They will shortly be updating to the new IBM range. There is a 3-shift system. Perks include subs cant., 4 weeks' hol. and free BUPA. CW43/8. Tricia.

## THE SALES BIT

## Fair or unfair dismissal: Points to watch

LAST week I wrote about the rights of the employee during the period of notice. This week I shall continue with the dismissal process itself.

An employee who has been continuously employed for a period of more than nine years has the right not to be unfairly dismissed by his employer. If he is dismissed in a manner which he believes to be unfair, he has the right to put his case before an industrial tribunal. This does not apply in cases where the employee is the wife or husband of the employee, where the employee has reached retirement age before the date the termination comes into effect, or where the employee is contracted to work overseas.

Once a case of disputed dismissal has come before an industrial tribunal the onus is upon the employee to prove that he was actually dismissed. Clearly, it is to the advantage of the employer to convince the tribunal that the employee actually resigned. However, if dismissal is proven or acknowledged by the employer, the burden of proof that such dismissal was not unfair lies with the employee.

The Employment Protection Act specifies five areas in which dismissal is acceptable, and unless the employer can state a principal reason for dismissal which falls into one of these categories, it is certain that a pronouncement of Unfair Dismissal will be made.

The permissible reasons for dismissal are:

1. The capability or qualifications of the employee for performing the work he was employed to do. This includes sickness.

2. The conduct and general behaviour of the employee.

3. Redundancy.

4. A legal restriction which makes continued employment impossible.

5. Some other substantial reason which justifies the act of dismissal.

The final category is rather broad, to say the least of it, but this is intended to embrace such situations as personality conflicts among employees, setting up or working

for a competing business and the completion of a fixed-term contract of employment.

Having shown that the reason for dismissal falls within these five categories, the employer must then go on to convince the tribunal that the dismissal was fair and reasonable in the circumstances. The basic consideration is whether or not the punishment fits the crime.

There are no hard and fast rules for this kind of judgment as each case is unique and has to be considered on its own merits. However, a number of guiding principles have been developed. The most important are:

● Employees should not normally be dismissed for a first offence, even if company rules state that employees are liable to instant dismissal for such an offence. A conviction of crime is not necessarily a good reason for dismissal.

● A full inquiry should be made into all the relevant facts before dismissal is decided upon.

● Employees can only rely on facts they know to be true at the time of dismissal to justify their action. Facts which come to light at a later date are ignored by tribunals.

● The employer does not need to prove categorically that the reason for dismissal is an absolute fact; reasonable belief is sufficient.

● In a borderline case where the decision to dismiss or not could have gone either way, management must have the last word. Tribunals should only step in and declare the dismissal to be unfair if they decide that no reasonable management would have dismissed the employee in the circumstances.

TRADER

# COMPUTER WEEKLY

OCTOBER 30, 1980

## RECRUITMENT & EDUCATION SUPPLEMENT

the most informative publication of its kind in the UK

In spite of rising unemployment the computer industry continues in its demand for a regular supply of qualified computer people. As the market expands, so to does the need for new skills and abilities. Although more and more training facilities are available, the chronic shortage of manpower remains, causing a major problem for all companies involved with computers.

Our annual Computer Weekly recruitment and education supplement, especially planned to coincide with and be available at Compec '80 — Britain's biggest computer exhibition — will be packed full of valuable information covering the whole spectrum of the computer job market. Editorial contribution will be substantial, appealing to data processing professionals, as well as the next generation of young people who will be required to take up the

challenge and share in the achievements of the next decade and beyond.

This years supplement will be published on October 30 and distributed in the normal way to all Computer Weekly readers. Copies will also be available to visitors from the Computer Weekly stand at Compec. Last year, some 34,745 visitors attended the exhibition.

The supplement is a unique publication, being the only newspaper of its kind produced in the U.K. dealing specifically with the subject of careers and job opportunities for DP personnel. The combination of the supplement's extensive editorial support, the large circulation, and Computer Weekly's standing in the industry, means this supplement is a must for recruitment advertisers.

Computer Weekly has the largest circulation in the specialist computer press (91,656 ABC July-Dec 1979). This has increased continually over the years to reflect the ever growing number of personnel in the computer industry. Additionally, and equally important, the newspaper has the highest number of individually requested copies of any weekly computer publication.

For further details regarding the supplement and the special Compec free computerised recruitment service, contact your nearest Computer Weekly Classified Office: London: 01-261 8028/8019/8174/8097, Manchester: 061-872 8861, Birmingham: 021-356 4838.

## TRAINEE COMPUTER AND TELECOMMUNICATIONS ENGINEERS AND A REPAIR TECHNICIAN

### UP TO £8,000 PLUS A CAR

Comshare is one of the top companies in the European computer time sharing industry with an intelligent data communications network which links some 100 computer centres in North America, the United Kingdom, Europe and Canada.

Presently our typical Computer Systems consist of several large dual Sigma 5 mainframes, with Ampex 500, 30 bit word memories, and Honeywell 4, 12 bit word memories, Memorex disc drives, SBC 6200 bit tape drives and Data Products printers. We are currently looking for

#### TRAINEE COMPUTER ENGINEERS AND A REPAIR TECHNICIAN

Engineers should have electronic knowledge and preferably some computer maintenance and peripheral experience.

A Repair Technician should also have the same experience and be capable of buying computer modules and power supplies as well as assisting with stores and spares.

We will provide Engineers with training where applicable, following which successful persons will become members of the engineering team which is involved in installing, commissioning

upgrading and maintaining our systems.

#### TELECOMMUNICATIONS ENGINEERS

Applicants should be highly motivated with HNC or equivalent in Electronic Engineering and a minimum of two years' solid experience in a data communications environment.

You will gain a lot of professional engineers with full responsibility for the 24 hour operation of the existing data communications network. Activities will include installation and maintenance of network hardware such as mini computers, multiplexers and modems. Ability to fault find to component level is essential.

These new opportunities offer career advancement to men or women in a fast moving environment, where exciting plans are shaping for further expansion into Europe.

Starting salaries will be up to £8,000 plus a car with overtime payment, and the fringe benefit package includes BUPA, EMS and a good pension scheme.

For Computer Engineers and Repair Technicians, contact Pete Mills. For Telecommunications Engineers, contact Ray Miles, both on 01-351 4399. Or write to them at Comshare Limited, P.O. Box 197, London SW3 5RL.
